

REPUBLIC OF MAURITIUS

FAMILY PLANNING AND DEMOGRAPHIC YEARBOOK 2012

VOLUME 38
NOVEMBER 2013

DEMOGRAPHIC/EVALUATION UNIT
MINISTRY OF HEALTH AND QUALITY OF LIFE

FOREWORD

Mauritius has been consistently ranked as the top performer in Africa in terms of family planning programme. Family planning has empowered women with the respect to both their productive and reproductive rights and has played a crucial role in attaining the Millennium Development Goals particularly 4, 5, and 6 which is health related. The Government of Mauritius provides comprehensive sexual and reproductive health services to its population, free of user cost, through a network of 1 Community Hospital, 3 Medi Clinics, 22 Area Health Centres, 117 Community Health Centres at Primary Health Care Level. Access to and use of contraceptives has given women the opportunity to take up employment in different sectors of the economy and thus contributing to the socio-economic development of the country.

The family planning programme has shifted its focus from achieving demographic targets to improving the reproductive health of the population, which is in line with the recommendations of the International Conference on Population and Development (ICPD) Plan of Action.

The Demographic/Evaluation Unit of the Ministry of Health and Quality of Life, which is responsible for monitoring and evaluating the national family planning programme, publishes the Family Planning and Demographic Yearbook. The present issue of this yearbook is the thirty-eighth volume and presents data on population trends, vital rates, family planning, and health service points for both Island of Mauritius and Island of Rodrigues.

The family planning and demographic data presented in this yearbook has been obtained from different Departments of this Ministry, namely the Medi Clinics, Area/Community Health Centres, the Medical Statistics Section, the Medical Records Division and from Statistics Mauritius.

Data from the Mauritius Family Planning and Welfare Association and Action Familiale, which are two non-governmental organizations that provide family planning services, are also included in this yearbook.

This Family Planning and Demographic Yearbook is intended for planners, policy makers and the general public.

In presenting this yearbook, I would like to thank my staff and other organizations involved directly or indirectly to its compilation.

J. Sunkur
Chief Demographer

ISLAND OF MAURITIUS

TABLE

POPULATION

A.1	Population at census dates, 1846-2011 : sex ratio, density and the annual intercensal growth rate	1
A.2	Estimated mid-year resident population by age group and sex, 2011 and 2012	2
A.3	Population at census dates by marital status and sex, 2000 and 2011	3
A.4	Proportion of currently and ever-married female population at census dates	4
A.5	End of year estimated resident population by district & sex , 2010-2012 – <i>Republic of Mauritius</i>	5
A.6	Projection of the resident population by sex, 2012-2032	6
A.7	Projection of the resident population by sex, 2037-2052	7
A.8	Distribution of the resident mid-year population by selected age group, age indicators and dependency ratios based on age 60 years & over by selected years	8
A.9	Distribution of the resident mid-year population by selected age group, age indicators and dependency ratios based on age 65 years & over by selected years	9
A.10	Vital rates for resident population projections (medium variant), 2012-2052	10

VITAL STATISTICS

B.1	Population growth and vital statistics, 1986-2012	11
B.2	Population and vital statistics rates, 1936-2012	12
B.3	Still births, perinatal, neonatal, infant and maternal deaths, 1980-2012	13
B.4	Crude birth rate by district, 1972, 1983, 1990, 2000, 2005-2012	14
B.5	Crude death rate by district, 1972, 1983, 1990, 2000, 2005-2012	14
B.6	Still birth rate by district , 1972, 1983, 1990, 2000, 2005-2012	15
B.7	Infant mortality rate by district, 1972, 1983, 1990, 2000, 2005-2012	15
B.8	Abridged life table by sex , 1971-73 and 2010-2012	16
B.9	Fertility rates, 1962, 1972, 1986, 2000, 2005-2012	17
B.10	Age-specific fertility rates by age of mother and live birth order, 2011 & 2012	18
B.11	Live births occurred by age of mother and live birth order, 2011 & 2012	19
B.12	Trend in fertility rates by live birth order, 2006-2012	20

Analysis of Demographic & Reproductive Health Indicators

This 2012 Yearbook is the thirty-eighth volume presenting demographic and family planning data for Island of Mauritius and for Island of Rodrigues. The 60 tables and 19 charts are grouped under the following headings: *population, vital statistics, family planning and health service points.*

Island of Mauritius

Age structure of the population

Table A.1 shows the population distribution of the Island of Mauritius at census dates. The average annual population growth rate was 0.84% during the intercensal period of 2000-2011: The censuses enumerated 1,248,126 inhabitants in 2011 compared to 1,143,069 inhabitants in 2000. In 2011, the sex ratio was 971 males per 1000 females.

Table A.2 shows the estimated mid-year resident population according to age group and sex in 2011 and 2012. The figures show that between 2011 and 2012 the proportion of population aged under 15 has decreased slightly from 20.8% to 20.3% and the proportion of the elderly population (aged 60 and above) has increased from 11.8% to 12.3%. Moreover, the median age of the population, the age at which 50% of the population is older and 50% is younger than that age, has increased from 33.3 years in 2011 to 33.7 years in 2012.

Table A.7 summarises the changes in the age structure of the Mauritian population from 1962 to 2052. The total size of the medium variant projected population is estimated to decline by 5.2% between 2012 and 2052. The proportion of people aged under 15 will decline from 20.3% in 2012 to 13.3% in 2052 and the proportion of people aged 60 and above will increase from 12.3% in 2012 to 30.2% in 2052. In absolute numbers, the elderly population will increase from 154,369 in 2012 to 358,887 in 2052, thus exhibiting an increase of slightly below threefold.

Chart 2 portrays the age-sex profiles of the population of Island of Mauritius. In 1962, there were larger percentages of the population in the younger age group as shown by the expansive population pyramid compared with the one in 2012. In 2052, the population pyramid shows larger percentages of the population in the older age group. Table A.7 shows that the median age of the population is projected to increase from 33.7 years in 2012 to 47.3 years in 2052.

Life expectancy at birth has improved considerably over the years. Table B.8 shows that life expectancy at birth was 77.15 years for females and 70.13 years for males in 2011. By 2052, life expectancy at birth is projected to be 80.09 years for females and 75.21 years for males (Table A.6).

Table B.1 indicates that the population growth rate in 2012 was 0.37% and if this rate is maintained annually, it will take about 189 years for the 2012 population to double in size.

Vital Rates

The last thirty years has been characterised by a cyclical trend in the crude birth rate: a steady decline from 22.1 in 1982 to 18.3 in 1986 and after an increase from 19.1 in 1987 to 21.1 in 1992, the crude birth rate decreased steadily to 11.0 in 2012. Moreover, the average crude birth rate in the last 5-year period has declined

compared with the preceding 5-year period, from 14.6 for the period of 2003-2007 to 11.6 for the period of 2008-12.

The crude death rate was 7.3 in 2012. In fact, the crude death rate has fluctuated between 6.5 and 7.3 during the last 30 years, i.e 1982-2012.

There have been significant improvements in the survival of infants over the past three decades. The infant mortality rate has decreased from 29.4 in 1982 to 13.4 in 2012 showing a decrease of 54.4%.

Table B.3 shows that the still birth rate has dropped from 20.2 in 1982 to 9.5 in 2012.

From 1980 to 2010, the maternal mortality rate dropped from 1.1 maternal death per 1000 live births to 0.28 (28 maternal deaths per 100,000 live births). The maternal mortality rate was 0.36 in 2011 and 0.65 in 2012.

The perinatal mortality rate has declined from 34.5 in 1982 to 16.2 in 2012 representing a decrease of about 53%.

The early neonatal mortality rate dropped from 14.6 in 1982 to 6.8 in 2012, thus indicating a decrease of 53.4 %. It should be noted that early neonatal deaths contributed to about 50% of all infant deaths in 2012.

Vital rates by geographical distribution

Tables B.4 to B.7 show the trends in vital rates by district in 1972, 1983, 1990, 2000 and from 2005 to 2012. Black River had the highest crude birth rate (14.4) in 2012, while Plaines Wilhems had the lowest crude birth rate (9.6). Overall, four districts had higher crude birth rates than the national level of 11.0.

In 2012, Port Louis had the highest crude death rate (8.9) and Flacq had the lowest crude death rate (6.1). Overall, three districts had higher crude death rates than the national level of 7.3.

In 2012, Pamplemousses had the lowest still birth rate (6.7) and Port Louis had the highest still birth rate (13.6). Overall, six districts had higher still birth rates than the national level of 9.5.

In 2012, Savanne had the lowest infant mortality rate (8.2) and Pamplemousses had the highest infant mortality rate (20.3). Two districts had higher infant mortality rates than the national level of 13.4.

Fertility Rates

Tables B.9 to B.12 show the trends in fertility rates. There has been a downward shift in the general fertility rate from 181.4 in 1962 to 59.44 in 2000 and a further decrease to reach 40.32 in 2012.

The total fertility rate decreased from 5.86 in 1962 to 1.94 in 1986, but increased to 1.97 in 2000. Thereafter, the total fertility rate showed a significant decrease to reach 1.41 in 2012, which was the lowest rate ever recorded in the Island of Mauritius. Hence, Island of Mauritius continues to experience below replacement fertility level (replacement level equals to 2.1 children per woman).

The net reproduction rate decreased from 2.51 in 1962 to 0.90 in 1986 but increased to 0.93 in 2000. In 2012, the net reproduction rate was 0.67, which was the lowest rate ever recorded in the Island of Mauritius.

Table B.9a shows that between 2005 to 2012, the fertility rates declined in all the five-year age groups except in the age group 45-49. In 2012, the age-specific fertility

rates showed that women aged 25-29 had the highest fertility rate (89.2) followed by women aged 20-24 (70.3). It is noted that between 2011 and 2012, the fertility rates of women aged 30-34 years and 40-44 years has increased from 59.0 to 61.7 and from 5.7 to 5.8 respectively.

Adolescent fertility rate (age group 15-19) decreased from 33.5 in 2005 to 28.2 in 2012, thus showing a decrease of 15.8%. In 2012, there were 14 live births pertaining to mothers aged under 15 years.

In 2012, there were 2,205 births of third and higher orders, which accounted for 16.0% of the 13,785 total live births occurred in the Island of Mauritius. Table B.11 shows that 10.2% of the total live births were to mothers aged under 20 years, thus representing 1,410 live births of which 20 were of third and higher orders.

The censuses reveal that the mean age of childbearing has increased from 26.3 years in 1983 to 26.9 years in 2000 and to 27.5 in 2011.

Nuptiality

Postponement of marriage has played a crucial role in fertility reduction in Mauritius as revealed by censuses data. Table A.4 shows that the proportion of currently married women in the age group 15-19 has declined from 27.80% in 1962 to 10.50% in 1983 and 6.24% in 2011.

Chart 7 shows a downward trend in the marriage rate from 21.4 in 1992 to 16.3 in 2012. In 2012, 10,197 marriages were registered in the Island of Mauritius.

The 2011 census figures show that the mean age at first marriage was 29.0 years for males and 23.9 years for females.

In 2012, 2,003 divorces were granted in the Republic of Mauritius compared with 1,788 in 2011 and 65.1% of all couples granted divorce in 2012 had at least one dependent child. Chart 8 shows that the divorce rate was 3.1 in 2012 for the Republic of Mauritius.

Family Planning

New Acceptors

In 2012, there were a total of 6,700 new acceptors in the Island of Mauritius at Government Family Planning Clinics, Mauritius Family Planning & Welfare Association (MFPWA) and Action Familiale (A.F.). This total also includes 493 new acceptors of tubal ligation reported at Government hospitals. Pill was the most preferred method among new acceptors accounting for 28.3% followed by male condom (22.3%), sympto-thermal (22.2%), 3-month injectable (13.4%), tubal ligation (7.4%), monthly injectable (3.0%), implant (1.7%) and intra-uterine device (1.6%).

Current Users

Table C.10 shows that there were a total of 68,825 current users as at 31st December 2012 in the Island of Mauritius at Government Family Planning Clinics, A.F. and MFPWA. This total also includes the 12,920 clients who have undergone tubal ligation, but were registered at Government hospitals. Among the total current users, 41.36% were on sympto-thermal, 21.32% were on tubal ligation, 13.52% were on pill, 12.73% were on male condom, 4.72% were on 3-month injectable, 3.44% were on intra-uterine device, 1.97% were on implant and 0.91% on monthly injectable.

The service statistics of Government and NGOs show that 20.1% of women in the reproductive age group and 32.9% of married women in the reproductive age group were contraceptive users in 2012.

Family Planning Service Points

The Ministry of Health and Quality of Life has established 5 operational health regions covering the whole Island of Mauritius and within each health region, there are service points that provide family planning services and information. Presently, there are 166 service points throughout Island of Mauritius: 1 Community Hospital, 3 Medi-Clinics, 22 Area Health Centres, 117 Community Health Centres, 3 Family Health Clinics, 2 Family Planning Clinics, 1 Family Planning Supply Centre and 17 Industrial Family Planning Supply Centres. Moreover, about 2,060 women in the reproductive age group are served per point.

Table E.3 show that there was an attendance of 84,101 family planning clients at the service points for the Island of Mauritius in 2012.

In 2012, 9 family planning clinics provided services after working hours, on Sundays and on public holidays.

Island of Rodrigues

Tables F.1 to F.6 show vital rates and family planning statistics in Rodrigues. In the past three decades, the crude birth rate dropped significantly from 38.4 in 1982 to 19.1 in 2012.

Fertility levels in Rodrigues, also measured by the total fertility rate, have declined from 5.16 in 1983 to 2.38 in 2012.

In 2012, women in the age group 30-34 had the highest fertility rate (97.0) followed by women aged 20-24 (96.8). The adolescent fertility rate (age group 15-19) was 63.0.

Rodrigues has witnessed remarkable improvement in the survival of infants. The infant mortality rate dropped from 56.7 in 1982 to 20.6 in 2012, thus representing a decrease of 63.7%.

The still birth rate dropped from 21.8 in 1982 to 10.9 in 2012, thus representing a decrease of 50.0%.

In 2011, 397 new acceptors were recorded in the family planning clinics in Rodrigues: 178 were on pill, 141 were on 3-month injectable, 28 were on sympto-thermal, 20 were on male condom, 26 were on implant and 4 were on intra-uterine device.

By the 31st of December 2012, 5,718 current users were recorded in the family planning clinics: 39.8% were on pill, 23.2% were on sympto-thermal, 17.9% were on 3-month injectable, 9.3% were on male condom, 4.4% were on tubal ligation, 2.9% on implant and 2.2 % were on intra-uterine device.

The service statistics of Government and NGOs show that 59.2% of women in the reproductive age group were contraceptive users in 2012.

Family Planning Service Points

In 2012, there were 17 family planning service points in the Island of Rodrigues and about 568 females in the reproductive age group were served per point.

In brief

Island of Mauritius, Year 2012

Population Data

<i>Estimated mid-year population</i>	1,253,000
<i>Population density (inhabitants per square km)</i>	672
<i>Sex ratio (males per 1,000 females)</i>	970
<i>Population growth rate (%)</i>	0.37
<i>% of mid-year population aged under 15 years</i>	20.3
<i>% of mid-year population aged 60 year & over</i>	12.3
<i>% of mid-year population aged 65 year & over</i>	7.7
<i>% of female population aged 15-49 years over total population</i>	27.3

Fertility

<i>Crude birth rate (per 1,000 mid-year population)</i>	11.0
<i>Total fertility rate</i>	1.41
<i>Gross reproduction rate</i>	0.69
<i>Net reproduction rate</i>	0.67

Mortality

<i>Crude death rate (per 1,000 mid-year population)</i>	7.3
<i>Infant Mortality rate (per 1,000 live births)</i>	13.4
<i>Maternal mortality rate (per 1,000 live births)</i>	0.65
<i>Life expectancy at birth (years) 2010-2012:</i>	
<i>Female</i>	77.15
<i>Male</i>	70.13

Family Planning (Government services and NGOs)

<i>Number of new acceptors</i>	6,700
<i>New acceptors as a % of female population aged 15-49 years</i>	2.0
<i>Number of current users</i>	68,825
<i>Current users as a % of female population aged 15-49 years</i>	20.1

Note:

*Mauritius is among the ten countries having the highest population density in the world.

^ More developed regions comprise all regions of Europe and Northern America, Australia/New Zealand and Japan.

> Less developed regions comprise all regions of Africa, Asia (excluding Japan) and Latin America and the Caribbean and the regions of Melanesia, Micronesia and Polynesia.

[@] PER 1,000 TOTAL BIRTHS (ie LIVE BIRTHS AND STILL BIRTHS)

[#] PER 1,000 LIVE BIRTHS

STILL BIRTH	: A CHILD BORN DEAD AFTER THE 28TH WEEK OF PREGNANCY
EARLY NEONATAL DEATHS	: DEATHS OCCURRING IN THE 1ST WEEK OF LIFE
PERINATAL DEATHS	: STILL BIRTHS + EARLY NEONATAL DEATHS
LATE NEONATAL DEATHS	: DEATHS BETWEEN 1 WEEK AND 4 WEEKS
NEONATAL DEATHS	: DEATHS UNDER 4 WEEKS
POST NEONATAL DEATHS	: DEATHS BETWEEN 4 WEEKS AND 1 YEAR
INFANT DEATHS	: DEATHS UNDER 1 YEAR
MATERNAL DEATHS	: DEATHS DUE TO COMPLICATIONS OF PREGNANCY

[@] Registered live births per 1,000 mid-year population.

[#] Live births per 1,000 women aged 15-49 years.

^{**} The average number of children born to a woman assuming that she survives to the end of her childbearing age and is subjected to a fixed schedule of age-specific fertility rates.

[^] The average number of daughters born to a woman assuming that she survives to her childbearing age and is subjected to a fixed schedule of age-specific fertility rates.

⁺ The average number of daughters that would be born to a woman during her lifetime if she passed through all her childbearing years conforming to a fixed schedule of age-specific fertility rates and age-specific mortality rates.

* Live births occurred per 1,000 women in each age-group.

REGION VI : 3 AHCs & 14 CHCs

MEDI-CLINIC	Basic Health Services, Family Planning Services, Maternal and Child Health Services, Vaccination, Well Baby Clinic, Non Communicable Diseases Clinic, Community Based Rehabilitation, Pharmacy Services, HIV/AIDS, Health Education, Diabetes Clinic, Ultra Sound for ANC, Dental Services, Public Health Services and Laboratory Services.
AREA HEALTH CENTRE (AHC)	Basic Health Services, Family Planning Services, Maternal and Child Health Services, Vaccination, Well Baby Clinic, Non Communicable Diseases Clinic, Community Based Rehabilitation, Pharmacy Services, HIV/AIDS, Health Education, Diabetes Clinic, Ultra Sound for ANC, Dental Services, Public Health Services.
COMMUNITY HEALTH CENTRE (CHC)	Basic Health Services, Family Planning Services, Maternal and Child Health Services, Vaccination, Well Baby Clinic, Non Communicable Diseases Clinic, Community Based Rehabilitation, Pharmacy Services, Health Education with Community Participation. May also have Dental Services.
FAMILY HEALTH CLINIC (FHC)	Family Planning Services, Maternal & Child Health Services, Well Baby Clinic, Health Education and Vaccination.
FAMILY PLANNING CLINIC (FPC)	Family Planning Services and Health Education.
FAMILY PLANNING SUPPLY CENTRES (FPSC)	Supply of pills, condoms and foaming tablets.
MOBILE FAMILY HEALTH CLINIC	Family Planning, Maternal & Child Health Services with doctor.
MOBILE FAMILY HEALTH SERVICES	Family Planning, Maternal & Child Health Services without doctor.
INDUSTRIAL FAMILY PLANNING SUPPLY CENTRE (IFPSC)	Supply of pills, condoms and foaming tablets and health education in industries.

CHART 18: NUMBER OF NEW ACCEPTORS OF PILL, MALE CONDOM, IUD, 3-MONTH INJECTABLE, TUBAL LIGATION, MONTHLY INJECTABLE & IMPLANT AT PRIMARY HEALTH CARE CENTRES BY DISTRICT (GOVERNMENT ONLY)

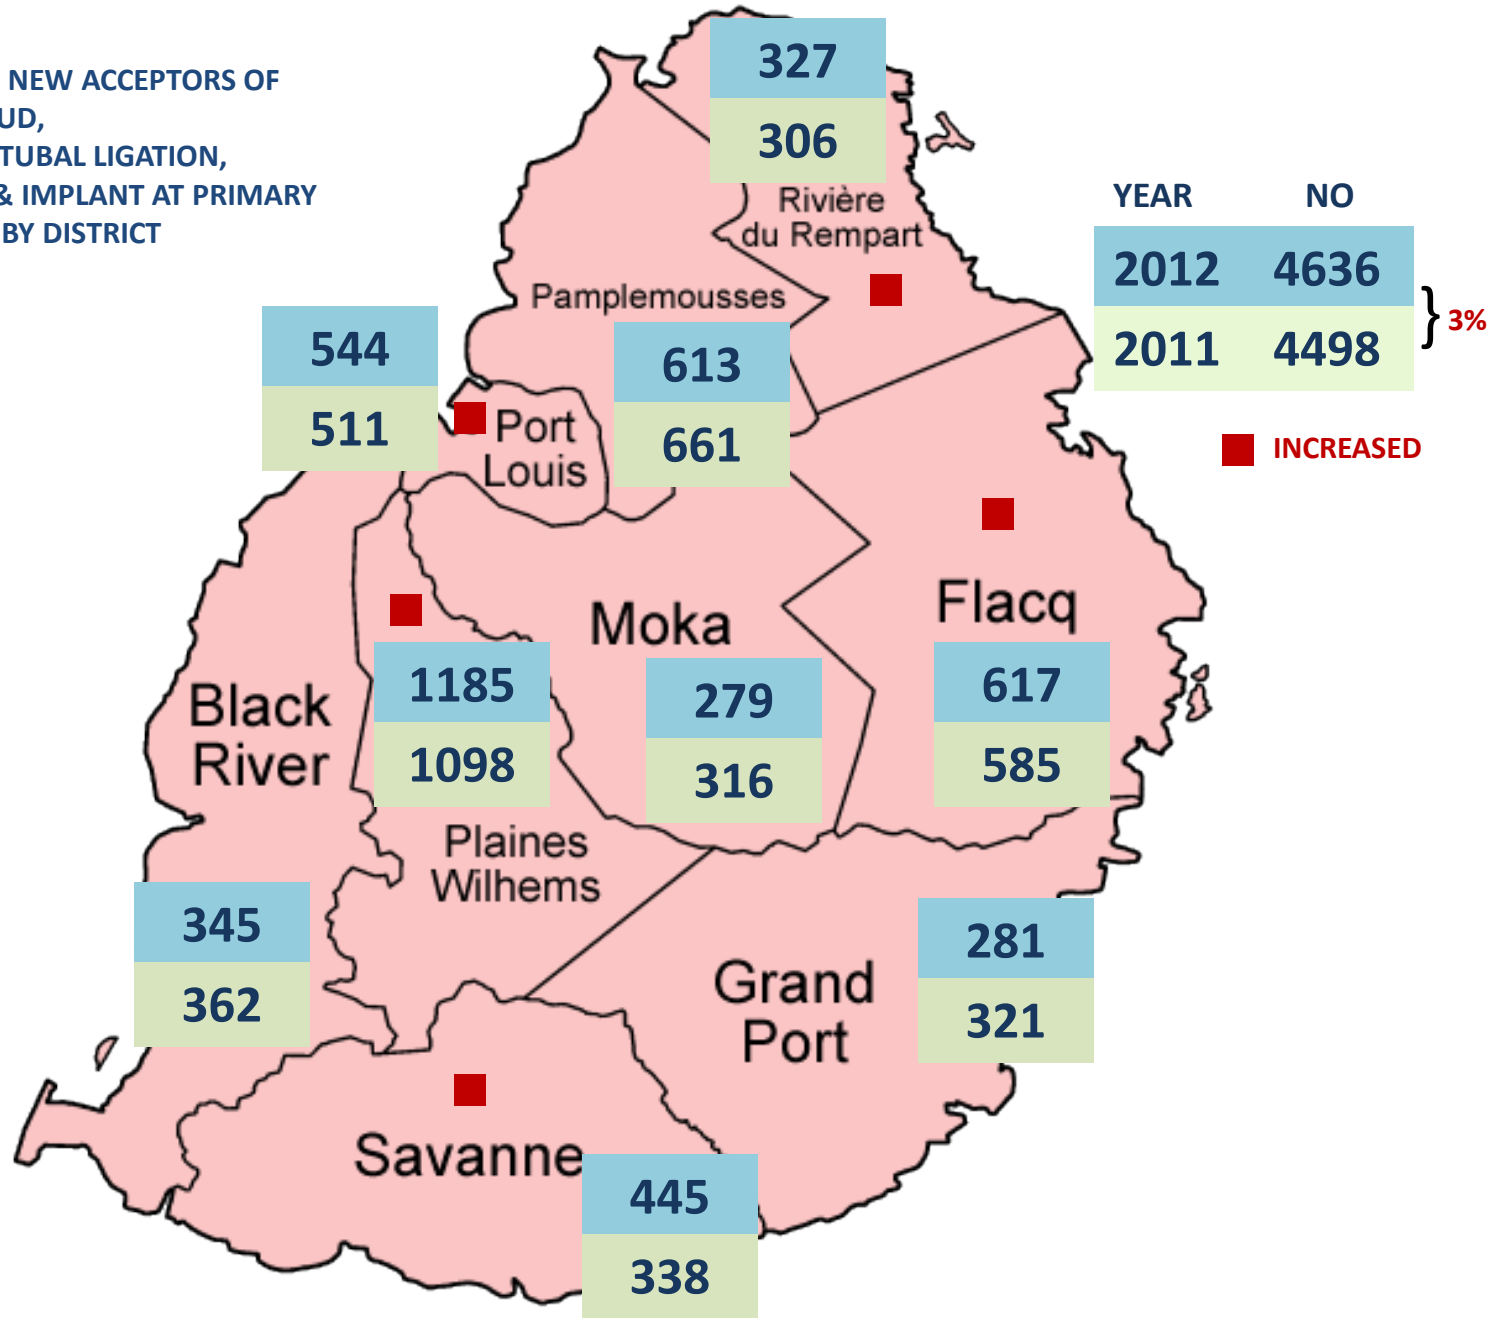

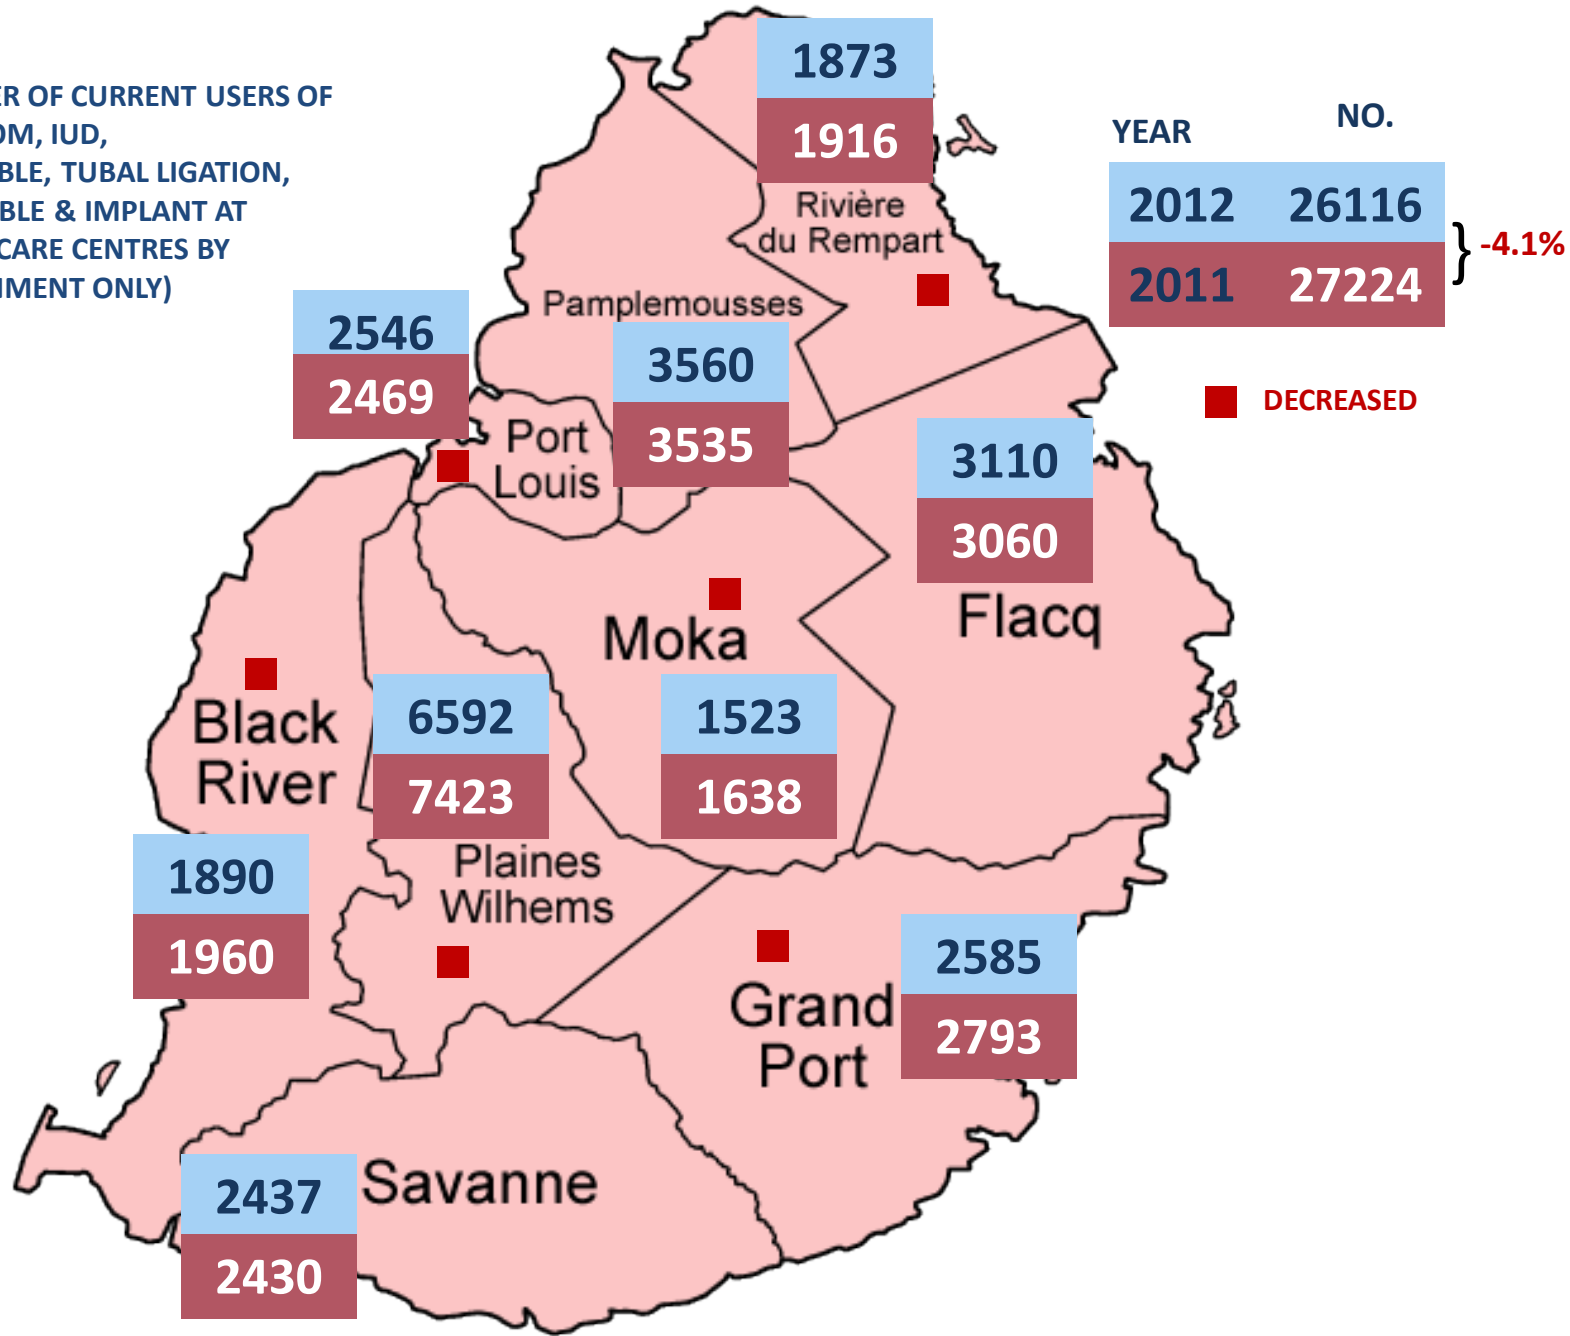

CHART 19: NUMBER OF CURRENT USERS OF PILL, MALE CONDOM, IUD, 3-MONTH INJECTABLE, TUBAL LIGATION, MONTHLY INJECTABLE & IMPLANT AT PRIMARY HEALTH CARE CENTRES BY DISTRICT (GOVERNMENT ONLY)

Glossary

Population

Census	The total process of collecting, compiling and publishing data on the demographic, social and economic situation of all persons in a specified territory at a particular time. Decennial censuses are usually the norm.
De facto population	A population enumerated or estimated on the basis of those present at a particular time, including temporary visitors but excluding residents temporarily absent.
De jure population	A population enumerated or estimated on the basis of normal residence, excluding temporary visitors but including residents temporarily absent.
Density of population	A ratio of the number of people to the area of land that they occupy usually given as number of persons per square kilometer of area.
Natural increase	The excess of births over deaths.
Rate of natural increase	The difference between births and deaths occurring in a year per 1000 mid-year population. This rate is the difference between the 'crude birth rate' and the 'crude death rate'.
Population growth	The change in population size due to the three demographic processes, namely, births, deaths, and migration.
Doubling time	The number of years it would take for the population to double its current size at the current annual rate of growth.
Net external migration	The difference between international departure and arrivals of residents.

Age structure

Sex ratio	The number of males per 100 females in a population.
Total Dependency ratio	The combined child population (below 15 years) and older population (aged 60 years and above) per 1,000 population of the intermediate age (15-59 years).
Young-age dependency ratio (per 1000)	The ratio of the population below age 15 years to that aged 15-59 years.
Old-age dependency ratio (per 1000)	The ratio of the population age 60 years and above to that aged 15-59 years.
Median age	The age that divides a population into numerically two equal groups; one which is younger and the other which is older.
Population pyramid	A graphic that portrays the age-sex distribution of the population.

Fertility

Crude birth rate	The number of live births occurring in a year per thousand estimated mid-year population.
Fertility	The childbearing performance of individuals, couples, groups or populations. It is contrasted with FECUNDITY, the theoretical capacity which may or may not lead to fertility.
General fertility rate	The number of live births occurring in a year per thousand estimated mid-year female population in their childbearing age (15-49 years).
Age-specific fertility rate	The number of live births occurring to women of a particular age or age group per year, normally expressed per 1,000 women. Five-year age groups from 15-19 to 45-49 are most commonly used.
Total fertility rate	The average number of <i>children</i> born to a woman assuming that she survives to the end of her childbearing age and is subjected to a fixed schedule of age-specific fertility rates.
Gross reproduction rate	The average number of <i>daughters</i> born to a woman assuming that she survives to the end of her childbearing age and is subjected to a fixed schedule of <i>age-specific fertility rates</i> . This is similar to the total fertility rate except that the gross reproduction rate counts only daughters.
Net Reproduction Rate	The average number of <i>daughters</i> that would be born to a woman during her lifetime if she passed through all her childbearing years conforming to a fixed schedule of <i>age-specific fertility rates and age-specific mortality rates</i> . The net reproduction rate is closely related to gross reproduction rate employing the same data on fertility but also indicating the effects of mortality.
Replacement level fertility	A net reproduction rate of 1.0 denotes replacement level fertility; the women are having just enough daughters to “replace” themselves in the population.
Mean age of Childbearing	The average age of mothers at the time of birth
Live birth order	The ordinal number of a given live birth in relation to all previous live births of the same woman.

Nuptiality

Marriage rate	The annual number of men and women marrying per thousand mid-year population
Divorce rate	The annual number of men and women divorcing per thousand mid-year population.

Mortality

Crude death rate	The number of deaths in a year per 1,000 mid-year population.
Infant deaths	The number of deaths occurring to children less than one year of age (0 - 364 days).
Infant mortality rate	The number of infant deaths in a year per 1,000 live births in the same year.
Child mortality rate	The number of deaths of children aged between one year and five years (1-4 years) in a year per 1,000 mid-year population aged between one year and five years (1-4 years) in the same year.
Under five mortality rate	The number of deaths of children aged under five years (0-4 years) in a year per 1,000 live births in the same year.
Still birth	The expulsion or extraction from the mother of a dead foetus after the time at which it would normally be presumed capable of independent extra uterine existence. This is taken to be after 28 weeks duration of pregnancy.
Still birth rate	The number of still births in a year per 1,000 total births (live births and still births).
Early neonatal mortality rate	The number of deaths of infants under one week (0-6 days) of age in a year per 1,000 live births in the same year.
Late neonatal mortality rate	The number of deaths of infants aged between one week and four weeks (7-27 days) in a year per 1,000 live births in the same year.
Neonatal mortality rate	The number of deaths of infants aged under four weeks (0-27 days) in a year per 1,000 live births in the same year.
Post neonatal mortality rate	The number of deaths of infants aged between four weeks and one year (28-364 days) in a year per 1,000 live births in the same year.
Perinatal mortality rate	The sum of the number of deaths of children aged under 7 days and the number of still births in a year per 1,000 total births (live births and still births) in the same year.
Maternal mortality	Mortality from causes connected with pregnancy, labour or the puerperium (lying-in period).
Maternal mortality rate	Number of deaths connected with pregnancy, labour or the puerperium divided by the number of live births and expressed per 1000 or 100,000.
Life expectancy at birth	The average number of years a newborn can expect to live based on the mortality conditions at the time.

Family Planning Clients & Activities

New acceptor	Someone who accepts a contraceptive method for the first time from a provider of a family planning programme.
Current User	A new acceptor who continues with the same or different method of contraception and pays regular return visits to the family planning service point to receive services and supplies.
Drop out	A current user who does not show up at scheduled appointment or thereafter within a defined period (according to the contraceptive method) for services and contraceptive resupplies at a family planning service point.
Drop out returnee	A client who starts receiving again the services and supplies available at the family planning service point after temporarily failing to pay return visits at the service point.
Canvassing	The purpose of canvassing is to seek potential clients who will benefit from information and services at a family planning service point.
Follow-Up	The purpose of follow ups is to remind clients that they have missed a scheduled appointment and to encourage them to make a return visit to the family planning service point.
Session	Field visits made by community health worker for canvassing and follow-ups.

Organisations and Acronyms

ACTION FAMILIALE (A.F.)	Action Familiale, a non-governmental organisation, was established in 1963 at the initiative of Msgr J. Margeot, then Vicar General of the Mauritian Catholic Diocese. Besides, promoting only sympto-thermal, which is a natural family planning method, Action Familiale provides a wide range of services which includes counselling services to couples.
MAURITIUS FAMILY PLANNING & WELFARE ASSOCIATION (MFPWA)	The MFPWA, a non-governmental organisation, was set up in 1957 by some volunteers who believed that the rampant population growth rate would hinder economic development in Mauritius. The MFPWA promotes modern methods of contraception and is involved in many family planning related activities.
MATERNAL AND CHILD HEALTH/ FAMILY PLANNING (MCH/FP)	The Ministry of Health and Quality of Life administers the Maternal and Child Health/Family Planning Programme which promotes reproductive health. The Family Planning Programme was integrated with the Maternal and Child Health Services in 1972.

World Population Day 2013:

Spotlight on Adolescent Pregnancy

The main purpose is to empower adolescent girls through the promotion of health and education. They can thus be in a better position to decide in an informed manner whether to marry at a later stage in their life and have children. Better educated adolescent girls will also be financially independent and earn higher incomes thus, improving their lives. They can thus serve as role models not only for their families and communities but also for future generations.

A safe, successful passage from adolescence into adulthood is the right of every child. Sexual and reproductive health and human rights are a cornerstone of this transition, influencing outcomes for years to come. If adolescents and youth are to flourish, and if the world is to reap the benefits of the “demographic dividend”, we need integrated sets of policies and programmes that address the “whole person”.

We should not forget that today’s adolescents represent the biggest generation in human history. They are opportunities and assets to be nurtured. Their rights, health, education and potential must be protected and included in the post-2015 development agenda.
