FAMILY PLANNING & DEMOGRAPHIC YEARBOOK 2014

**VOLUME 40
OCTOBER 2015**

AVERAGE NUMBER OF CHILDREN PER WOMAN*

**Total fertility rate*

YEAR 2014

**DEMOGRAPHIC/EVALUATION UNIT
MINISTRY OF HEALTH AND QUALITY OF LIFE**

FOREWORD

Mauritius is often cited as a top performer in Africa in terms of population and sexual reproductive health programme. It is duly recognized that sexual and reproductive health services play an important role in the social and economic development of a country. A core function of the Ministry of Health and Quality of Life is delivering a comprehensive sexual and reproductive services including family planning to its population, free of user cost, through a network of 1 Community Hospital, 5 Medi Clinics, 20 Area Health Centres, 117 Community Health Centres at Primary Health Care Level.

With emerging reproductive health issues as a result of socio-economic changes in the past years, the sexual and reproductive health programme has been re-engineered by implementing the National Sexual and Reproductive health Strategy and Plan of Action 2009-2015. Besides, the family planning programme has shifted its focus from achieving demographic targets to improving the reproductive health of the population, which is in line with the recommendations of the International Conference on Population and Development (ICPD) Plan of Action.

The Demographic/Evaluation Unit of the Ministry of Health and Quality of Life, which is responsible for monitoring and evaluating the national family planning programme, publishes the Family Planning and Demographic Yearbook. The present issue of this yearbook is the fortieth volume and presents data on population trends, vital rates, family planning, and health service points for both Island of Mauritius and Island of Rodrigues.

The family planning and demographic data presented in this yearbook has been obtained from different Departments of this Ministry, namely the Medi Clinics, Area/Community Health Centres, the Medical Statistics Section, the Medical Records Division and from Statistics Mauritius.

Data from the Mauritius Family Planning and Welfare Association and Action Familiale, which are two non-governmental organizations that provide family planning services, are also included in this yearbook.

This Family Planning and Demographic Yearbook is intended for planners, policy makers and the general public.

In presenting this yearbook, I would like to thank my staff and other organizations involved directly or indirectly to its compilation.

J. Sunkur

SELECTED DEMOGRAPHIC & REPRODUCTIVE HEALTH INDICATORS – <i>ISLAND OF MAURITIUS</i>	X-XI

ISLAND OF MAURITIUS**TABLE****POPULATION**

A.1	Population at census dates, 1846-2011 : sex ratio, density and the annual intercensal growth rate	1
A.2	Estimated mid-year resident population by age group and sex, 2013 and 2014	3
A.3	Population at census dates by marital status and sex, 2000 and 2011	4
A.4	Proportion of currently and ever-married female population at census dates	5
A.5	End of year estimated resident population by district & sex , 2012-2014 – <i>Republic of Mauritius</i>	6
A.6	Projection of the resident population by sex, 2014-2034	8
A.7	Projection of the resident population by sex, 2039-2054	9
A.8	Distribution of the resident mid-year population by selected age group, age indicators and dependency ratios based on age 60 years & over by selected years	11
A.9	Distribution of the resident mid-year population by selected age group, age indicators and dependency ratios based on age 65 years & over by selected years	12
A.10	Vital rates for resident population projections (medium variant), 2014-2054	14

VITAL STATISTICS

B.1	Population growth and vital statistics, 1987-2014	15
B.2	Population and vital statistics rates, 1936-2014	16
B.3	Still births, perinatal, neonatal, infant and maternal deaths, 1981-2014	19
B.4	Crude birth rate by district, 1972, 1983, 1990, 2000, 2007-2014	20
B.5	Crude death rate by district, 1972, 1983, 1990, 2000, 2007-2014	20
B.6	Still birth rate by district , 1972, 1983, 1990, 2000, 2007-2014	21
B.7	Infant mortality rate by district, 1972, 1983, 1990, 2000, 2007-2014	21
B.8	Abridged life table by sex , 1971-73 and 2012-2014	22
B.9	Fertility rates, 1962, 1972, 1986, 2000, 2007-2014	23
B.10	Age-specific fertility rates by age of mother and live birth order, 2013 & 2014	26
B.11	Live births occurred by age of mother and live birth order, 2013 & 2014	27
B.12	Trend in fertility rates by live birth order, 2008-2014	28

Analysis of Demographic & Reproductive Health Indicators

This 2014 Yearbook is the fortieth volume presenting demographic and family planning data for Island of Mauritius and for Island of Rodrigues. The 60 tables and 19 charts are grouped under the following headings: *population, vital statistics, family planning and health service points.*

Island of Mauritius

Age structure of the population

Table A.1 shows the population distribution of the Island of Mauritius at census dates. The average annual population growth rate was 0.42% during the intercensal period of 2000-2011: The censuses enumerated 1,196,383 inhabitants in 2011 compared to 1,143,069 inhabitants in 2000. In 2011, the sex ratio was 976 males per 1000 females.

Table A.2 shows the estimated mid-year resident population according to age group and sex in 2013 and 2014. The figures show that between 2013 and 2014 the proportion of population aged under 15 has decreased slightly from 20.4% to 19.9% and the proportion of the elderly population (aged 60 and above) has increased from 13.8% to 14.3%. Moreover, the median age of the population, the age at which 50% of the population is older and 50% is younger than that age, has increased from 34.4 years in 2013 to 34.9 years in 2014.

Table A.8 summarises the changes in the age structure of the Mauritian population from 1962 to 2054. The total size of the medium variant projected population is estimated to decline by 19.7% between 2014 and 2054. The proportion of people aged under 15 will decline from 19.9% in 2014 to 11.5% in 2054 and the proportion of people aged 60 and above will increase from 14.3% in 2014 to 33.8% in 2054. In absolute numbers, the elderly population will increase from 174,643 in 2014 to 330,972 in 2054, thus exhibiting an increase of slightly above twofold.

Chart 4 portrays the age-sex profiles of the population of Island of Mauritius. In 1962, there were larger percentages of the population in the younger age group as shown by the expansive population pyramid compared with the one in 2014. In 2054, the population pyramid shows larger percentages of the population in the older age group. Table A.8 shows that the median age of the population is projected to increase from 34.9 years in 2014 to 52.9 years in 2054.

Life expectancy at birth has improved considerably over the years. Table B.8 shows that life expectancy at birth was 77.57 years for females and 70.89 years for males in 2013. By 2054, life expectancy at birth is projected to be 79.51 years for females and 75.19 years for males (Table A.7).

Table B.1 indicates that the population growth rate in 2014 was 0.13% and if this rate is maintained annually, it will take about 538 years for the 2014 population to double in size.

Vital Rates

The last three decades has been characterised by a cyclical trend in the crude birth rate: a steady decline from 22.1 in 1982 to 18.3 in 1986 and after an increase from 19.1 in 1987 to 21.1 in 1992, the crude birth rate decreased steadily to 10.4 in 2014. Moreover, the average crude birth rate in the last 5-year period has declined

compared with the preceding 5-year period, from 13.5 for the period of 2005-2009 to 11.2 for the period of 2010-14.

The crude death rate was 7.7 in 2014. In fact, the crude death rate has fluctuated between 6.5 and 7.7 during the last 30 years, i.e 1984-2014.

There have been significant improvements in the survival of infants over the past three decades. The infant mortality rate has decreased from 23.1 in 1984 to 14.1 in 2014 showing a decrease of 39.0%. Moreover, the average infant mortality rate in the last 5-year period has declined compared to the preceding 5-year period from 13.9 for the period of 2005-2009 to 12.9 for the period 2010-2014.

The under-five mortality rate is a leading indicator of child health and overall human development and it is indicative of government commitment to health. Figures show that the under-five mortality rate has decreased from 27.8 in 1984 to 15.6 on 2014 showing a decrease of 43.9%.

Table B.3 shows that the still birth rate has dropped from 19.8 in 1984 to 10.1 in 2014 showing a decrease of 49.0%.

The maternal mortality rate dropped from 0.7 maternal death per 1000 live births in 1991 to 0.55 (55 maternal deaths per 100,000 live births). The average maternal mortality rate was 0.51 for the last 5-year period 2010-2014.

The perinatal mortality rate has declined from 31.5 in 1984 to 15.8 in 2014 representing a decrease of 49.8%.

The early neonatal mortality rate dropped from 11.9 in 1984 to 5.7 in 2014, thus indicating a decrease of 52.1%. It should be noted that early neonatal deaths contributed to about 41% of all infant deaths in 2014.

Vital rates by geographical distribution

Tables B.4 to B.7 show the trends in vital rates by district in 1972, 1983, 1990, 2000 and from 2007 to 2014. Port Louis had the highest crude birth rate (12.8) in 2014, while Flacq had the lowest crude birth rate (9.4). Overall, three districts had higher crude birth rates than the national level of 10.4.

In 2014, Port Louis had the highest crude death rate (9.9) and Black River had the lowest crude death rate (6.4). Overall, three districts had higher crude death rates than the national level of 7.7.

In 2014, Pamplemousses had the lowest still birth rate (6.3) and Flacq had the highest still birth rate (12.8). Overall, six districts had higher still birth rates than the national level of 10.1.

In 2014, Riviere du Rempart had the lowest infant mortality rate (8.3) and Moka had the highest infant mortality rate (20.3). Five districts had higher infant mortality rates than the national level of 14.1.

Fertility Rates

Tables B.9 to B.12 show the trends in fertility rates. There has been a downward shift in the general fertility rate from 181.4 in 1962 to 59.44 in 2000 and a further decrease to reach 40.34 in 2014.

The total fertility rate decreased from 5.86 in 1962 to 1.94 in 1986, but increased to 1.97 in 2000. Thereafter, the total fertility rate showed a significant decrease to reach 1.41 in 2014. Island of Mauritius continues to experience below replacement fertility level (replacement level equals to 2.1 children per woman).

The net reproduction rate decreased from 2.51 in 1962 to 0.90 in 1986 but increased to 0.93 in 2000. In 2014, the net reproduction rate was 0.68.

Table B.9a shows that between 2007 to 2014, the fertility rates declined in all the five-year age groups except in the age group 35-39. In 2014, the age-specific fertility rates showed that women aged 25-29 had the highest fertility rate (90.1) followed by women aged 30-34 (65.5). It is noted that between 2013 and 2014, there has been a slight increase in fertility among women aged 25-39 years.

Adolescent fertility rate (age group 15-19) decreased from 35.4 in 2007 to 23.8 in 2014, thus showing a decrease of 32.8%. In 2014, there were 27 live births pertaining to mothers aged under 15 years.

In 2014, there were 2,088 births of third and higher orders, which accounted for 16.5% of the 12,658 total live births occurred in the Island of Mauritius. Table B.11 shows that 8.7% of the total live births were to mothers aged under 20 years, thus representing 1,106 live births of which 20 were of third and higher orders.

The censuses reveal that the mean age of childbearing has increased from 26.3 years in 1983 to 26.9 years in 2000 and to 27.5 in 2011.

Nuptiality

Postponement of marriage has played a crucial role in fertility reduction in Mauritius as revealed by censuses data. Table A.4 shows that the proportion of currently married women in the age group 15-19 has declined from 27.80% in 1962 to 10.50% in 1983 and 6.24% in 2011.

Chart 9 shows a downward trend in the marriage rate from 20.8 in 1994 to 16.1 in 2014. In 2014, 9,796 marriages were registered in the Island of Mauritius.

The 2011 census figures show that the singulate mean age at marriage was 29.0 years for males and 23.9 years for females.

In 2014, 2,262 divorces were granted in the Republic of Mauritius compared with 1,584 in 2013 and 66.3% of all couples granted divorce in 2014 had at least one dependent child. Chart 10 shows that the divorce rate was 1.9 in 2014 for the Republic of Mauritius.

Family Planning

New Acceptors

In 2014, there were a total of 5,206 new acceptors in the Island of Mauritius at Government Family Planning Clinics, Mauritius Family Planning & Welfare Association (MFPWA) and Action Familiale (A.F.). This total also includes 454 new acceptors of tubal ligation reported at Government hospitals. Pill was the most preferred method among new acceptors accounting for 26.1% followed by sympto-thermal (23.6%), male condom (20.4%), 3-month injectable (17.4%), tubal ligation (8.7%), monthly injectable (1.6%), intra-uterine device (1.2%) and implant (0.8%).

Current Users

Table C.10 shows that there were a total of 66,510 current users as at 31st December 2014 in the Island of Mauritius at Government Family Planning Clinics, A.F. and MFPWA. This total also includes the 13,177 clients who have undergone tubal ligation, but were registered at Government hospitals. Among the total current users, 42.49% were on sympto-thermal, 21.85% were on tubal ligation, 12.21% were on male condom, 12.15% were on pill, 5.37% were on 3-month injectable, 3.38% were on intra-uterine device, 1.92% were on implant and 0.62% on monthly injectable.

The service statistics of Government and NGOs show that 21.2% of women in the reproductive age group and 30.3% of married women in the reproductive age group

were contraceptive users in 2014. However at national level, as revealed by the results of the 2014 contraceptive prevalence survey, 63.8% of married women in the reproductive age group used family planning methods. This nationwide survey revealed that besides from government clinics, Action Familiale and MFPWA, women obtained their contraceptive supplies from private clinics and pharmacies and others used traditional methods.

Family Planning Service Points

The Ministry of Health and Quality of Life has established 5 operational health regions covering the whole Island of Mauritius and within each health region, there are service points that provide family planning services and information. Presently, there are 164 service points throughout Island of Mauritius: 1 Community Hospital, 5 Medi-Clinics, 20 Area Health Centres, 117 Community Health Centres, 2 Family Health Clinics, 3 Family Planning Clinics and 16 Industrial Family Planning Supply Centres. Moreover, about 1,913 women in the reproductive age group are served per point.

Table E.3 shows that there was an attendance of 72,749 family planning clients at the service points for the Island of Mauritius in 2014.

In 2014, 8 family planning clinics provided services after working hours, on Sundays and on public holidays.

Island of Rodrigues

Tables F.1 to F.6 show vital rates and family planning statistics in Rodrigues. In the past three decades, the crude birth rate dropped significantly from 30.7 in 1984 to 16.5 in 2014.

Fertility levels in Rodrigues, also measured by the total fertility rate, have declined from 5.16 in 1983 to 2.14 in 2014.

In 2014, women in the age group 25-29 had the highest fertility rate (104.7) followed by women aged 30-34 (92.7). The adolescent fertility rate (age group 15-19) was 52.0 which is the lowest figure ever recorded in Rodrigues.

Rodrigues has witnessed remarkable improvement in the survival of infants. The infant mortality rate dropped from 53.7 in 1984 to 21.8 in 2014.

The still birth rate dropped from 17.5 in 1984 to 11.5 in 2014, thus representing a decrease of 34.3%.

In 2014, 386 new acceptors were recorded in the family planning clinics in Rodrigues: 153 were on pill, 126 were on 3-month injectable, 38 were on sympto-thermal, 18 on tubal ligation, 29 were on implant, 15 were on male condom, and 7 were on intra-uterine device.

By the 31st of December 2014, 5,293 current users were recorded in the family planning clinics: 40.3% were on pill, 21.8% were on sympto-thermal, 15.9% were on 3-month injectable, 9.8% were on male condom, 6.0% on implant, 4.1% were on tubal ligation and 2.2 % were on intra-uterine device.

The service statistics of Government and NGOs show that 49.0% of women in the reproductive age group were contraceptive users in 2014.

Family Planning Service Points

In 2014, there were 17 family planning service points in the Island of Rodrigues and about 636 females in the reproductive age group were served per point.

In brief

Island of Mauritius, Year 2014

Population Data

<i>Estimated mid-year population</i>	1,219,265
<i>Population density (inhabitants per square km)</i>	654
<i>Sex ratio (males per 1,000 females)</i>	980
<i>Population growth rate (%)</i>	0.13
<i>% of mid-year population aged under 15 years</i>	19.9
<i>% of mid-year population aged 60 year & over</i>	14.3
<i>% of mid-year population aged 65 year & over</i>	8.9
<i>% of female population aged 15-49 years over total population</i>	25.7

Fertility

<i>Crude birth rate (per 1,000 mid-year population)</i>	10.4
<i>Total fertility rate</i>	1.41
<i>Gross reproduction rate</i>	0.69
<i>Net reproduction rate</i>	0.68

Mortality

<i>Crude death rate (per 1,000 mid-year population)</i>	7.7
<i>Infant Mortality rate (per 1,000 live births)</i>	14.1
<i>Maternal mortality rate (per 1,000 live births)</i>	0.55
<i>Life expectancy at birth (years) 2011-2013:</i>	
<i>Female</i>	77.57
<i>Male</i>	70.89

Family Planning (Government Services and NGOs)

<i>Number of new acceptors</i>	5,206
<i>New acceptors as a % of female population aged 15-49 years</i>	2.4
<i>Number of current users</i>	66,495
<i>Current users as a % of female population aged 15-49 years</i>	30.3

[@] Registered live births per 1,000 mid-year population.

[#] Live births per 1,000 women aged 15-49 years.

^{**} The average number of children born to a woman assuming that she survives to the end of her childbearing age and is subjected to a fixed schedule of age-specific fertility rates.

[^] The average number of daughters born to a woman assuming that she survives to her childbearing age and is subjected to a fixed schedule of age-specific fertility rates.

⁺ The average number of daughters that would be born to a woman during her lifetime if she passed through all her childbearing years conforming to a fixed schedule of age-specific fertility rates and age-specific mortality rates.

* Live births occurred per 1,000 women in each age-group.

■ DECREASED

* EXCLUDES NEW ACCEPTORS OF FEMALE CONDOM: 3 IN 2014 (1 IN PAMPLEMOUSSES AND 2 IN RIVIERE DU REMPART) & 2 IN 2013 (1 IN FLACQ AND 1 IN PLAINES WILHEMS).

NUMBER OF CURRENT USERS* BY DISTRICT

•NUMBER OF CURRENT USERS OF PILL, MALE CONDOM, IUD, 3-MONTH INJECTABLE, TUBAL LIGATION, MONTHLY INJECTABLE & IMPLANT AT PRIMARY HEALTH CARE CENTRES BY DISTRICT (GOVERNMENT ONLY).

Glossary

Population

Census	The total process of collecting, compiling and publishing data on the demographic, social and economic situation of all persons in a specified territory at a particular time. Decennial censuses are usually the norm.
De facto population	A population enumerated or estimated on the basis of those present at a particular time, including temporary visitors but excluding residents temporarily absent.
De jure population	A population enumerated or estimated on the basis of normal residence, excluding temporary visitors but including residents temporarily absent.
Density of population	A ratio of the number of people to the area of land that they occupy usually given as number of persons per square kilometer of area.
Natural increase	The excess of births over deaths.
Rate of natural increase	The difference between births and deaths occurring in a year per 1000 mid-year population. This rate is the difference between the 'crude birth rate' and the 'crude death rate'.
Population growth	The change in population size due to the three demographic processes, namely, births, deaths, and migration.
Doubling time	The number of years it would take for the population to double its current size at the current annual rate of growth.
Net external migration	The difference between international departure and arrivals of residents.

Age structure

Sex ratio	The number of males per 100 females in a population.
Total Dependency ratio	The combined child population (below 15 years) and older population (aged 60 years and above) per 1,000 population of the intermediate age (15-59 years).
Young-age dependency ratio (per 1000)	The ratio of the population below aged 15 years to that aged 15-59 years.
Old-age dependency ratio (per 1000)	The ratio of the population aged 60 years and above to that aged 15-59 years.
Median age	The age that divides a population into numerically two equal groups; one which is younger and the other which is older.
Population pyramid	A graphic that portrays the age-sex distribution of the population.

Fertility

Crude birth rate	The number of live births occurring in a year per thousand estimated mid-year population.
Fertility	The childbearing performance of individuals, couples, groups or populations. It is contrasted with FECUNDITY, the theoretical capacity which may or may not lead to fertility.
General fertility rate	The number of live births occurring in a year per thousand estimated mid-year female population in their childbearing age (15-49 years).
Age-specific fertility rate	The number of live births occurring to women of a particular age or age group per year, normally expressed per 1,000 women. Five-year age groups from 15-19 to 45-49 are most commonly used.
Total fertility rate	The average number of <i>children</i> born to a woman assuming that she survives to the end of her childbearing age and is subjected to a fixed schedule of age-specific fertility rates.
Gross reproduction rate	The average number of <i>daughters</i> born to a woman assuming that she survives to the end of her childbearing age and is subjected to a fixed schedule of <i>age-specific fertility rates</i> . This is similar to the total fertility rate except that the gross reproduction rate counts only daughters.
Net Reproduction Rate	The average number of <i>daughters</i> that would be born to a woman during her lifetime if she passed through all her childbearing years conforming to a fixed schedule of <i>age-specific fertility rates and age-specific mortality rates</i> . The net reproduction rate is closely related to gross reproduction rate employing the same data on fertility but also indicating the effects of mortality.
Replacement level fertility	A net reproduction rate of 1.0 denotes replacement level fertility; the women are having just enough daughters to "replace" themselves in the population.
Mean age of Childbearing	The average age of mothers at the time of birth

Live birth order	The ordinal number of a given live birth in relation to all previous live births of the same woman.
------------------	---

Nuptiality

Marriage rate	The annual number of men and women marrying per thousand mid-year population
Divorce rate	The annual number of men and women divorcing per thousand mid-year population.

Mortality

Crude death rate	The number of deaths in a year per 1,000 mid-year population.
Infant deaths	The number of deaths occurring to children less than one year of age (0 - 364 days).
Infant mortality rate	The number of infant deaths in a year per 1,000 live births in the same year.
Child mortality rate	The number of deaths of children aged between one year and five years (1-4 years) in a year per 1,000 mid-year population aged between one year and five years (1-4 years) in the same year.
Under five mortality rate	The number of deaths of children aged under five years (0-4 years) in a year per 1,000 live births in the same year.
Still birth	The expulsion or extraction from the mother of a dead foetus after the time at which it would normally be presumed capable of independent extra uterine existence. This is taken to be after 28 weeks duration of pregnancy.
Still birth rate	The number of still births in a year per 1,000 total births (live births and still births).
Early neonatal mortality rate	The number of deaths of infants under one week (0-6 days) of age in a year per 1,000 live births in the same year.
Late neonatal mortality rate	The number of deaths of infants aged between one week and four weeks (7-27 days) in a year per 1,000 live births in the same year.
Neonatal mortality rate	The number of deaths of infants aged under four weeks (0-27 days) in a year per 1,000 live births in the same year.
Post neonatal mortality rate	The number of deaths of infants aged between four weeks and one year (28-364 days) in a year per 1,000 live births in the same year.
Perinatal mortality rate	The sum of the number of deaths of children aged under 7 days and the number of still births in a year per 1,000 total births (live births and still births) in the same year.
Maternal mortality	Mortality from causes connected with pregnancy, labour or the puerperium (lying-in period).
Maternal mortality rate	Number of deaths connected with pregnancy, labour or the puerperium divided by the number of live births and expressed per 1000 or 100,000.
Life expectancy at birth	The average number of years a newborn can expect to live based on the mortality conditions at the time.

Family Planning Clients & Activities

New acceptor	Someone who accepts a contraceptive method for the first time from a provider of a family planning programme.
Current User	A new acceptor who continues with the same or different method of contraception and pays regular return visits to the family planning service point to receive services and supplies.
Drop out	A current user who does not show up at scheduled appointment or thereafter within a defined period (according to the contraceptive method) for services and contraceptive resupplies at a family planning service point.
Drop out returnee	A client who starts receiving again the services and supplies available at the family planning service point after temporarily failing to pay return visits at the service point.
Canvassing	The purpose of canvassing is to seek potential clients who will benefit from information and services at a family planning service point.
Follow-Up	The purpose of follow ups is to remind clients that they have missed a scheduled appointment and to encourage them to make a return visit to the family planning service point.
Session	Field visits made by community health worker for canvassing and follow-ups.

Organisations and Acronyms

ACTION FAMILIALE (A.F.)	Action Familiale, a non-governmental organisation, was established in 1963 at the initiative of Msgr J. Margeot, then Vicar General of the Mauritian Catholic Diocese. Besides, promoting only sympto-thermal, which is a natural family planning method, Action Familiale provides a wide range of services which includes counselling services to couples.
MAURITIUS FAMILY PLANNING & WELFARE ASSOCIATION (MFPWA)	The MFPWA, a non-governmental organisation, was set up in 1957 by some volunteers who believed that the rampant population growth rate would hinder economic development in Mauritius. The MFPWA promotes modern methods of contraception and is involved in many family planning related activities.
MATERNAL AND CHILD HEALTH/ FAMILY PLANNING (MCH/FP)	The Ministry of Health and Quality of Life administers the Maternal and Child Health/Family Planning Programme which promotes reproductive health. The Family Planning Programme was integrated with the Maternal and Child Health Services in 1972.

WORLD POPULATION DAY 2015: VULNERABLE POPULATIONS IN EMERGENCIES

World Population Day is a yearly recurrent feature which is celebrated worldwide on 11 July to raise awareness of important population and development issues. This year, people around the world will be observing the 25th World Population Day to enhance awareness of population issues, including their relations to the environment and development.

The global theme for this year is

“Vulnerable Populations in Emergencies”.

The United Nations Population Fund has chosen this theme to focus on women, children and young people who comprise over three quarters of the over 50 million people who have been forcibly displaced from their homes by conflict and disasters in most parts of the world. Girls and women in crisis situations face much greater risk of abuse, sexual exploitation, violence, forced marriage, reproductive health-related illnesses, and death due to the lack of protection and an absence of aid delivery to address their needs.
