

FAMILY PLANNING AND DEMOGRAPHIC YEARBOOK 2021

VOLUME 47 NOVEMBER 2022

THIS PAGE IS INTENTIONALLY LEFT BLANK

FOREWORD

The population of Mauritius is ageing due to sustained low fertility level and increasing life expectancy, which in turn is resulting to lower proportion of children and higher proportion of elders in the population. There has been a remarkable decline in fertility in the past few decades as measured by the total fertility rate. The total fertility rate dropped below the replacement-level fertility of 2.10 children per woman - the level needed for a woman to replace herself and her partner- for the first time in the mid-1980s; however, it was not until 1997 onward that fertility has continuously been at sub-replacement level. In 2021, the total fertility rate was 1.36 children per woman.

The Family Planning and Demographic Yearbook presents data on population trends and family planning use and accessibility, amongst others, for both Island of Mauritius and Island of Rodrigues. This yearbook is intended for planners, policy makers, and the general public.

The data presented in the yearbook has been obtained from the different departments of this Ministry (the Primary Health Care Division, the Health Statistics Unit, the Health Records Division, and the Human Resource Section) as well as from Statistics Mauritius and the non-governmental organisations, namely Mauritius Family Planning and Welfare Association and Action Familiale.

The yearbook has been published by the Demographic/Evaluation Unit of the Ministry of Health and Wellness, which is responsible for monitoring and evaluating the national family planning programme, and its present issue is the forty-seventh volume.

Special thanks go to the staff of the Demographic/Evaluation Unit of this Ministry for their assistance in the compilation of this yearbook and to the staff of other departments and organisations for providing statistics that have been published in this yearbook.

J.Sunkur Chief Demographer November 2022

LIST OF TABLES POPULATION

TABLE

PAGE

A.1	Population at census date: for both sexes and by sex; the sex ratio, the population	
	density; and the annual intercensal growth rate, 1846-2011	1
A.2	Population enumerated at census dates by marital status and sex, 2000 and 2011	3
A.3	Percent distribution of currently and ever married female population at census dates	4
A.4	Estimated mid-year resident population by age group and sex, 2020 and 2021	5
A.5	Estimated end-year resident population by district & sex, 2019-2021	7
A.6	Population growth and vital statistics, 1992-2021	8
A.7	Life expectancy by age and sex, selected years	9
A.8	Projection of the resident population by sex, 2021-2041	10
A.9	Projection of the resident population by sex, 2046-2061	11
A.10	Distribution of the resident population at census years by selected age group,	
	age indicators, dependency ratios (based on age 60 and over), and ageing index,	
	census years, 1962-2011	13
A.11	Distribution of the resident mid-year population by selected age group, age	
	indicators, dependency ratios (based on age 60 and over), and ageing index,	
	selected years, 2021-2061	14
A.12	Distribution of the resident population at census years by selected age group, age	
	indicators, dependency ratios (based on age 65 and over), and ageing index,	
	census years, 1962-2011	18
A.13	Distribution of the resident mid-year population by selected age group, age	
	indicators, dependency ratios (based on age 65 and over), and ageing index,	
	selected years, 2021-2061	19

VITAL STATISTICS

B.1	Population and vital statistics rates, 1936-2000	21
B.2	Population and vital statistics rates, 2001-2021	22
B.3	Still births, perinatal, neonatal, infant and maternal deaths, 1987-2021	25
B.4	Crude birth rate by district, 1972, 1983, 1990, 2000, 2011-2021	27

TABLE		PAGE
B.5	Crude death rate by district, 1972, 1983, 1990, 2000, 2011-2021	27
B.6	Still birth rate by district , 1972, 1983, 1990, 2000, 2011-2021	28
B.7	Infant mortality rate by district, 1972, 1983, 1990, 2000, 2011-2021	28
B.8	Fertility rates, 1962, 1972, 1983, 1990, 2000, 2011-2021	29
B.9	Age-specific fertility rates by age of mother: 1962, 1972, 1983, 1990, 2000, 2011-202	29
B.10	The number of women in the reproductive age group, 2021	29
B.11	Age-specific fertility rates by age of mother and live birth order, 2020 & 2021	31
B.12	Trends in the general fertility rates by live birth order, 2012-2021	
B.13	Live births occurred by age of mother and live birth order, 2020 & 2021	33
B.14	Projected demographic rates, 2021-2026 to 2056-2061	34

FAMILY PLANNING NEW ACCEPTORS

C.1	Number of new acceptors by family planning method according to organisation,		
	2012-2021	37	
C.2	Number of new acceptors of pill by district and organisation, 2012-2021	38	
C.3	Number of new acceptors of male condom by district and organisation, 2012-2021	39	
C.4	Number of new acceptors of IUD by district and organisation, 2012-2021	40	
C.5	Number of new acceptors of 3-month injectable by district and		
	organisation, 2012-2021	41	
C.6	Number of new acceptors of sympto-thermal by district, 2012-2021	42	
C.7	Total number of new acceptors by district, 2012-2021	43	
C.8	Total number of new acceptors by method, according to district, 2021	45	
C.9	Number of new acceptors of family planning methods and of service points by		
	organisation, 2017-2021	46	

CURRENT USERS

C.10	Number of current users by family planning method according to	
	organisation, 2012-2021	47
C.11	Number of current users by family planning method, according to district and	
	organisation as at 31 st December 2021	48

TABLE		PAGE
C.12	Number of current users of pill by district and organisation as at 31 st December, 2012-2021	50
C.13	Number of current users of male condom by district and organisation as at 31 st December, 2012-2021	
C.14	Number of current users of intra-uterine device by district and organisation as at 31 st December, 2012-2021	
C.15	Number of current users of 3-month injectable by district and organisation as at 31 st December, 2012-2021	53
C.16	Number of current users of implant by district and organisation as at 31 st December, 2012-2021	54
C.17	Number of current users of 1-month injectable by district and organisation as at 31 st December, 2012-2021	
C.18	Number of current users of sympto-thermal by district as at 31 st December, 2012-2021	56
C.19	Total number of current users by district and organisation as at 31 st December, 2012-2021	
	CONTRACEPTIVE COMMODITIES	
C.20	Distribution of contraceptive commodities to family planning clients by Organisation, 2001-2021	58
C.21	Trend in the distribution of contraceptive commodities to family planning clients, 2012-2021	59
C.22	Talks on sexual and reproductive health, 2012-2021 (Government Family Planning Programme)	
	FAMILY PLANNING SERVICE POINTS, PERSONNEL AND EXPENDITURES	
D.1	Number of government family planning (FP) service points by district as at 31 st December 2021	61
D.2	Number of government family planning (FP) and maternal and child health (MCH) service points as at 31 st December 2012-2021	
D.3	Number of personnel at government family planning (FP) and maternal and child health (MCH) service points as at 31 st December 2012-2021	
D.4	Government family planning (FP) and maternal and child health (MCH) manpower as at 31 st December 2021	
D.5	Calendar expenditures on family planning programme by organisation, 2004-2021	

TABLE	E P	AGE
	FAMILY PLANNING ACTIVITIES	
E.1	Number of sessions, follow-ups carried out and canvassing of potential family planning clients by district, 2017-2021	65

33	Total fertility rates, 2002-2021	77

A SUMMARY ON THE DEMOGRAPHIC AND FAMILY PLANNING STATISTICS

A summary of the statistics presented in the 2021 Family Planning and Demographic Yearbook is given in this section. The 2021 Yearbook is the forty-seventh volume and provides statistics for Island of Mauritius and Island of Rodrigues on demography as well as on family planning for the government and the two non-governmental organisations, namely Mauritius Family Planning and Welfare Association and Action Familiale. The tables and charts in this volume have been grouped under the following headings: population, vital statistics, and family planning.

ISLAND OF MAURITIUS

CENSUS

The last population census was carried out in July 2022 but as at publication of this yearbook, census data are not yet available. The de jure¹ counts of the two previous censuses revealed that there were 1,196,383 inhabitants in 2011 and 1,143,069 inhabitants in 2000, and that the population density has increased from 613 inhabitants per square kilometre in 2000 to 642 in 2011 (Table A.1). Moreover, it is noted that the average annual population growth rate of 0.42% for the period 2000-2011 was lower than the annual growth rate of 1.12% for the earlier intercensal period 1990-2000.

POPULATION SIZE, GROWTH AND DISTRIBUTION

The estimated resident population was 1,221,840 as at 1^{st} July 2021, thus showing a decrease of 81 persons since 1^{st} July 2020 (*Table A.4*). Moreover, the estimated midyear population in 2021 shows that there were more females than males: 617,472 females and 604,368 males.

¹ A population enumerated on the basis of normal residence, excluding temporary visitors but including residents temporarily absent.

In 2021, an estimate of 42% of the population lived in urban areas and 58% lived in rural areas.

SEX RATIO

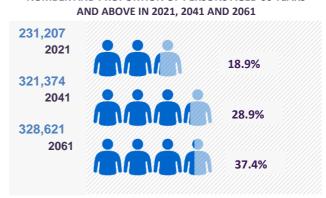

The sex ratio is a measure used to describe the balance between males and females in a population. In 2021, the sex ratio of the total population was 97.9 males per 100 females.

Due to the 'female survival advantage' in life expectancy, there are more females in the older age groups than in the younger age groups, and the gap increases with age. For instance, in 2021, there were 80.9 men per 100 women in the age group 60 and above and 54.9 men per 100 women in the age group 80 and above (*Chart 4*).

CHANGING AGE STRUCTURE

The population of Mauritius is ageing due to sustained low fertility level and increasing life expectancy, which in turn is resulting to lower proportion of children and higher proportion of elders in the population. The ageing index shows that there were about 116 older persons aged 60 years and above for every 100 children younger than 15 years old in 2021. Hence, as the population is growing older, Mauritius is witnessing a change in its age structure.

The share of the population aged 60 years and above in the total mid-year population has increased from 9.1% in 2000 to 18.9% in 2021, and it is projected² to increase to 28.9% in 2041 and 37.4% in 2061 (*Chart 11*).

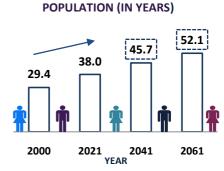

SHARE IN THE TOTAL MID-YEAR POPULATION

² Medium variant projection based on 2021 population.

Conversely, the share of the population aged 0-14 years in the total mid-year population has decreased from 25.0% in 2000 to 16.3% in 2021, and it is projected to decrease to 13.2% in 2041 and 10.8% in 2061. It is also noted that the share of the population aged 15-59 years has decreased slightly (from 65.8% of the total mid-year population in 2000 to 64.8% in 2021), and it is projected to decrease to 57.9% in 2041 and 51.8% in 2061.

Changes in the age structure are also reflected in the median age of the population; 50% of the population is older than this age and 50% is younger. The median age of the population has increased from 29.4 years in 2000 to 38.0 years in 2021, and it is projected to increase to 45.7 years in 2041 and 52.1 years in 2061.

MEDIAN AGE OF THE

Mauritius is also witnessing a progressive ageing of its older population. The share of persons aged 80 years or older in the population aged 60 years and above is projected to increase from 11.0% in 2021 to 19.2% in 2061 (Chart 12). In other words, 1 in 9 persons aged 60 years and above was 80 years or older in 2021, and this ratio is projected to be 1 in 5 in 2061.

Population pyramids are useful in examining the age-sex structure of a population. The juxtaposed population pyramids for year 2021 and 2061 show that due to the projected rise in the number and proportion of old people in the population, the apex of the 2061 pyramid is broader than that of the 2021 pyramid (*Chart 9*). Moreover, based on the projected changes in the age structure, there will be an increasingly demand for healthcare services for the older persons.

Another ramification of the changes in the age distribution is that the total dependency ratio will continue to increase. The total dependency ratio compares the number of dependents (children aged 0-14 years and older persons aged 60 years and above) to the number of persons of working age (i.e. 15-59 years); a higher ratio indicates a higher burden on the working age population. The total dependency ratio has increased from 519.2 dependents per 1000 persons of working age in 2000 to 544.0 in 2021, and it is projected to increase to 727.3 in 2041 and 931.1 in 2061 (*Table A.11*).

WOMEN IN THE REPRODUCTIVE AGE GROUP (15-49 YEARS)

The number and proportion of women in the reproductive age group (15-49 years) are important demographic factors to consider in a reproductive health (including family planning) programme. The share of women in the reproductive age group (15-49 years) in the total mid-year female population was 49.4% in 2021, and it is projected to decrease to 41.8% in 2041 and 34.2% in 2061 (Chart 13).

LIFE EXPECTANCY

Life expectancy at birth has improved considerably and is expected to improve further over the years. It increased from 69.3 years in 1989-1991 to 73.6 years in 2019-2021 (Table A.7). Likewise, female life expectancy at birth increased from 73.4 years in 1989-1991 to 77.2 years in 2019-2021 and male life expectancy at birth increased from 65.6 years in 1989-1991 to 70.2 years in 2019-2021. WOMEN ARE LIVING LONGER THAN MEN

Life expectancy at birth is higher for females than for males but the gap between male and female life expectancy at birth is narrowing. The above-mentioned figures show that a girl born in 1989-1991 could expect to live 7.8 years longer than a boy born in the same period, and for a girl born in 2019-2021, she could expect to live 7 years longer.

Life expectancy at age 60 for the total population was 20.1 years in 2019-2021, and women aged 60 years in 2019-2021 could expect to live an additional 21.9 years, compared with 18.2 years for men aged 60 years in the same period.

VITAL STATISTICS

It is the first time after 89 years (Year 1932), the country has recorded more deaths than births indicating a negative natural increase of the population. In 2021, there were 12,108 live births and 12,990 deaths. Moreover, it is noted that there were 446 less live births but 2,222 more deaths in 2021 than in 2020 (Table B.2).

The crude birth rate has declined from 11.3 births per 1,000 mid-year population in 2012 to 9.9 in 2021, and the crude death rate has increased from 7.5 deaths per 1,000 mid-year population in 2012 to 10.6 in 2021. Hence, the rate of natural increase was 3.8 in 2012 and -0.7 in 2021. Moreover, it is noted that the crude birth rate for the five-year period has declined, from 10.5 in 2012-2016 to 10.1 in 2017-2021. As for the crude death rate, it has fluctuated between 7.5 and 10.6 during the period of 2012-2021.

There were 165 infant deaths (deaths under 1 year of age) that were registered in 2021, resulting to 19 less infant deaths than in 2020. The infant mortality rate, which is the number of infant deaths in a year per 1,000 live births, is often used as a proxy measure of the overall health of the population. The infant mortality rate has increased from 13.4 deaths per 1,000 live births in 2012 to 13.6 in 2021, thus showing in a slight rise of 1.5%. Moreover, it is to be noted that the infant mortality rates for the five-year period has increased from 13.0 in 2012-2016 to 13.6 in 2017-2021.

Neonatal deaths (deaths of babies under 28 days of age) accounted for 70.3% of all infant deaths in 2021. The neonatal mortality rate, which is the number of neonatal deaths in a year per 1,000 live births, is a key outcome indicator for newborn care and directly reflects prenatal, intrapartum, and neonatal care. During the period of 2012-2021, the neonatal mortality rate has fluctuated between 7.6 and 10.5 deaths per 1,000 live births; in 2021, this rate was 9.6.

The number of still births was 121 in 2021 compared to 132 in 2020. The still birth rate, which is the number of still births in a year per 1,000 total births, has fluctuated between 8.7 and 10.7 during the period of 2012-2021. In 2021, the still birth rate was 9.9.

The under-five mortality rate is a leading indicator of child health and overall human development. The under-five mortality rate (deaths of children under five years of age per 1,000 live births) has decreased from 15.3 in 2012 to 15.1 in 2021, thus showing a slight decline of 1.3%. However, the data shows that the under-five year mortality rate for the five-year period has increased, from 14.8 in 2012-2016 to 15.3 in 2017-2021.

There has been a marked improvement in maternal health especially in the last two decades of the twentieth century (*Table B.3*). For instance, the maternal mortality ratio declined from 0.99 maternal deaths per 1,000 live births in 1987 to 0.15 in 2000.

Factors such as strengthening and expanding the maternal and child health services, accessibility to family planning services, and contraceptive use have been associated with this declining trend.

In 2021, the maternal mortality ratio was 0.58 maternal deaths per 1,000 live births (or 58 maternal deaths per 100,000 live births). It is noted that the maternal mortality ratio (i.e. maternal deaths per 1,000 live births) has fluctuated between 0.33 and 0.79 during the ten-year period of 2012 to 2021. As part of the renewed commitment from the government to improve further the reproductive health indicators, policies and strategies have been formulated and are being implemented.

VITAL STATISTICS BY DISTRICT³

In 2021, the crude birth rates ranged from 7.8 in Flacq to 13.5 in Port Louis (*Table B.4*). Three districts had higher rates (Port Louis, Pamplemousses, and Black River) than the national level of 9.9.

In 2021, the crude death rates ranged from 7.5 in Black River to 14.4 in Port Louis (*Table B.5*). Four districts had higher rates (Port Louis, Grand Port, Savanne and Plaines Wilhems) than the national level of 10.6.

In 2021, the still birth rates ranged from 4.6 in Flacq to 16.0 in Savanne (*Table B.6*). Four districts had higher rates (Port Louis, Pamplemousses, Savanne and Plaines Wilhems) than the national level of 9.9.

In 2021, the infant mortality rates ranged from 4.0 in Moka to 26.7 in Black River (*Table B.7*). Five districts had higher rates (Port Louis, Rivière de Rempart, Grand Port, Savanne and Black River) than the national level of 13.6.

³ Island of Mauritius is divided into nine districts (see map).

FERTILITY

There has been a remarkable decline in fertility in the past few decades as measured by the total fertility rate. The total fertility rate is the average number of babies that a woman could expect to bear if current fertility rates prevail throughout her reproductive lifetime. The total fertility rate dropped sharply from 5.86 children per woman in 1962 to 3.42 in 1972 and continued to drop further thereafter.

The total fertility rate dropped below the replacement-level fertility of 2.10 children per woman - the level needed for a woman to replace herself and her partner - for the first time in the mid-1980s; however, it was not until 1997 onward that fertility has continuously been at sub-replacement level. In 2021, the total fertility rate was 1.36 children

per woman compared with 1.52 in 2012, resulting in a decrease of 10.5%. Interestingly, it was noted that there was an increase in the total fertility rate from 1.35 in 2019 to 1.40 in 2020 – the year where the Covid-19 pandemic was declared (*Table B.8*). However, the total fertility rate has declined to 1.36 in 2021.

In 2021, women in the age-groups 15-19, 20-24 and 25-29 had lower fertility rates than women in the same age group in 2012 (Table B.9), and the largest percentage decrease in fertility rates were among women aged 20-24 years (38.2%).

Early childbearing increases health risks for both mothers and their newborns. The fertility rate for women aged 15-19 years (adolescent fertility rate) has decreased from 29.3 in 2012 to 19.5 in 2021, resulting in a decline of 33.4%. Even though progress has been made in reducing the fertility rate among adolescents, it is noted that 11 live births occurred to adolescents under 15 years of age in 2021.

In 2021, the age-specific fertility rates showed that women *aged 30-34* years had the *highest* fertility rate (80.7) among all age groups, and that women *aged 25-29 years* (78.1) and women *aged 20-24 years* (47.1) had the *second* and *third* highest fertility rate respectively (*Table B.9*).

The median age of childbearing has increased from 29.0 years in 2020 to 29.5 years in 2021.

NUPTIALITY

Island of Mauritius

The 1962 and 1972 censuses showed that the proportion of currently married women in the age group 15-19 declined by slightly more than half, from 27.8% in 1962 to 12.5% in 1972 (*Table A.3*) whilst the average number of children per woman dropped from about 6 to 3 in the same period. Factors that have been linked to this sharp reduction in fertility between 1962 and 1972 include, among others, the postponement of marriage among younger women and contraceptive use. The 2011 census revealed that the proportions of currently married women in the age group 15-19 and 20-24 were 6.3% and 34.8% respectively.

There were 8,011 marriages that were registered in the Island of Mauritius in 2021, and the majority of brides (84.4%) and bridegrooms (85.8%) had never been married before. The crude marriage rate has declined from 16.8 marriages per 1,000 mid-year population in 2012 to 13.1 in 2021, resulting in a drop of 22.0%.

The median age of females and males at first marriage was 27.57 years and 30.38 years respectively in the Island of Mauritius in 2021. The median age at first marriage for females has increased by 0.37 years since 2020 and the median age at first marriage for males has increased by 0.40 years since 2020.

The data shows that 1,921 divorces and 2,043 divorces have been granted in 2020 and 2021 respectively in the Island of Mauritius. The crude divorce rate ranged between 2.5 to 3.8 during the period of 2008-2021 (*Chart 18*). In 2021, the crude divorce rate was 3.3 divorces per 1,000 mid-year population. Overall, 80.7% of all couples granted divorce in 2021 had at least one dependent child.

FAMILY PLANNING

Availability

Family planning helps save women's and children's lives by preventing unplanned pregnancies. Family planning services, including contraceptives, have been available to individuals and couples, free of user cost at government health service points since 1968.

The government family planning programme provides a wide range of short-term and long-term contraceptive methods⁴ through a network of health service points.

FAMILY PLANNING BENEFITS

- Advances human rights
- Saves lives
- Prevents HIV/AIDS transmission
- Helps reduce poverty
- Advances gender equality and empowerment
- Supports the achievement of the sustainable development goals (SDGs)

However, availability of family planning services in Mauritius dates back since 1957 when the non-governmental organization (NGO) Mauritius Family Planning and Welfare Association (MFPWA) was set up. The MFPWA family planning programme was then integrated with the government maternal and child health programme in 1972, and thereafter, MFPWA has continued to run a family planning clinic where contraceptive methods and counselling services are offered. Moreover, the NGO Action Familiale, which was established in 1963, has been promoting use of natural family planning methods and has been providing counselling services.

There is a concerted effort between the Government, MFPWA, and Action Familiale to provide family planning services. The national family planning programme has long shifted its focus from achieving demographic targets to improving the reproductive health of the population. However, since its inception, the guiding principle of the family planning programme has been that all couples and individuals have the basic right to decide freely and responsibly the number, spacing, and timing of their children.

⁴ The short-term contraceptive methods are male condom; female condom; pill; 1-month injectable; and 3-month injectable, and the long-term contraceptive methods are implant; IUD; and tubal ligation. Emergency contraceptive pills are also available. It should be pointed out that confidential counselling is an integral component of family planning services. In addition to being counseled on contraception, clients receive information on sexually transmitted infections as well as on preconception care and fertility awareness.

Family Planning Clients⁵

New Acceptors

In 2021, there were 2,775 new acceptors who were registered at the family planning service points of the government, MFPWA, and Action Familiale in the Island of Mauritius (Table C.1). This figure includes 485 new acceptors of tubal ligation reported at government hospitals. Three-month injectable was the most preferred method among the new acceptors accounting for 24.7%, followed by pill (19.9%), male condom (18.9%), tubal ligation (17.5%), sympto-thermal (12.0%), 1-month injectable (3.7%), IUD (1.6%), and implant (1.6%).

Current Users

As at 31st December 2021, there were 55,792 current (GOVERNMENT, MEPWA & ACTION FAMILIALE) users who were registered at the family planning service points of the government, MFPWA, and Action Familiale in the Island of Mauritius (Table C.11). This figure includes 13,695 current users of tubal ligation reported at government hospitals.

Sympto-thermal was the most preferred method among the current users accounting for 47.1%, followed by tubal ligation (25.5%), male condom (11.2%), pill (6.0%), 3-month injectable (5.0%), IUD (3.0%), implant (1.5%), and 1-month injectable (0.8%).

The yearly average number of current users for the five-year period has decreased from 65,775 in 2012-2016 to 57,986 in 2017-2021 (Table C.10), resulting in a decline of 11.8%.

There are different types of family planning clients, and they include new acceptors and current users. A new acceptor is someone who accepts a contraceptive method for the first time from a provider of a family planning programme. A current user is someone who uses a method of contraception that has been obtained from the provider of the family planning programme. It should be pointed out that since the number of family planning clients of female condom in the government is small; it has been excluded in this section (In 2021: 1 new acceptor and 5 current users for Island of Mauritius).

Moreover, the programme-based statistics (for the government, MFPWA, and Action Familiale) shows that 18.2% of women aged 15-49 years were using a contraceptive method in 2021. However, the Contraceptive Prevalence Survey, which was carried out in 2014, showed that higher proportions of women (40.9%) aged 15-49 years and of currently married women (63.8%) aged 15-49 years were using a contraceptive method in the Island of Mauritius. This nationwide survey revealed that women in the reproductive age group 15-49 years were obtaining their contraceptive method either from programme sources (government and NGOs) or from non-programme sources (e.g. pills from pharmacies) or were using non-programme methods (such as withdrawal).

Accessibility and Attendance

Government family planning services are available through an extensive network of health service points, covering the whole island of Mauritius⁶ (*Appendix III*). Presently, there are 151 government family planning service points: 1 Community Hospital; 6 Medi-Clinics; 21 Area Health Centres; 115 Community Health Centres; 2 Family Health Clinics; 3 Family Planning Clinics; and 3 Industrial Family Supply Centres. Hence, in relation to the population size, there were about 2,021 women in the reproductive age group (15-49 years) per government family planning service point.

There has been a decline in the number of attendances at the government family planning service points from 50,412 in 2019 to 39,473 in 2020 due to the Covid-19 pandemic and in 2021, 36,659 attendances were recorded.

In 2021, eight family planning clinics provided services after working hours, on Sundays and on public holidays.

⁶ For administrative purposes, five health regions have been established by the Ministry of Health and Wellness.

ISLAND OF RODRIGUES

VITAL STATISTICS

There were 874 live births and 284 deaths that were registered in 2021 (Table F.2). The crude birth rate was 19.8 births per 1,000 mid-year population and the crude death rate was 6.4 deaths per 1,000 mid-year population in 2021. Hence, the rate of natural increase was 13.4 in 2021.

The crude birth rate has increased from 17.4 births per 1,000 live births in 2012 to 19.7 in 2020 and in 2021, it was 19.8.

The infant mortality rate has increased from 15.5 deaths per 1,000 live births in 2012 to 17.0 in 2020 and in 2021, it was 16.0.

The still birth rate has increased from 6.5 still births per 1,000 total births in 2012 to 10.3 in 2020 and in 2021, it was 11.3.

The total fertility rate has declined from 3.19 children per woman in 1990 to 2.68 in 2020 and in 2021, it was 2.73 (*Table F.3*). In 2021, the age-specific fertility rates showed that women *aged 25-29* years had the *highest* fertility rate (140.0) among all age groups and that women *aged 30-34* years (126.3) had the *second* highest fertility rate (*Table F.4*).

FAMILY PLANNING

Family Planning Clients⁷

New Acceptors

In 2021, there were 316 new acceptors who were registered at the family planning service points of the government, MFPWA, and Action Familiale in the Island of Rodrigues (*Table F.5*).

⁷ Refer to footnote 5 for types of family planning clients. It should be pointed out that since the number of family planning clients of female condom in the government is small; it has been excluded in this section (In 2021: 0 new acceptors and 0 current users for Island of Rodrigues).

Pill was the most preferred method among the new acceptors, accounting for 31.6%, followed by 3-month injectable (30.7%) and male condom (16.1%).

Current Users

As at 31st December 2021, there were 3,997 current users who were registered at the family planning service points of the government, MFPWA, and Action Familiale in the Island of Rodrigues (*Table F.6*). Pill was the most preferred method among the current users accounting for 29.9%, followed by sympto-thermal (27.9%), male condom (14.4%), 3-month injectable (12.6%), implant (7.8%), IUD (3.9%), and tubal ligation (3.5%).

Family Planning Service Points

In 2021, there were 15 government family planning service points in the Island of Rodrigues (*Table F.7*). Hence, in relation to the population size, there were about 761 women in the reproductive age group (15-49 years) per government family planning service point.

Attendance

In 2021, a total number of 8,269 attendances have been recorded at the government family planning service points.

 The ratio of the number of persons aged less than 15 years to the number of persons of working age (i.e. 15-59 years old).

* The ratio of the number of persons aged 60 years and above to the number of persons of working age (i.e. 15-59 years old).

□ The ratio of the number of persons aged less than 15 years and the number of persons aged 60 years and above to the number of persons of working age (i.e. 15-59 years old).

Number of persons of working age (i.e. 15-59 years) for every older person aged 60 years and above.

• Number of older persons aged 60 and above per 100 children aged less than 15 years.

NOTE: Percentages in the table do not necessarily add to totals because of rounding.

NOTE: DATA IN THE TABLE ARE SHOWN AS THE NUMBER OF DEPENDENTS PER 1,000 POPULATION OF WORKING AGE. TABLE A.11DISTRIBUTION OF THE RESIDENT MID-YEAR POPULATION

Medium variant projection - base year 2020

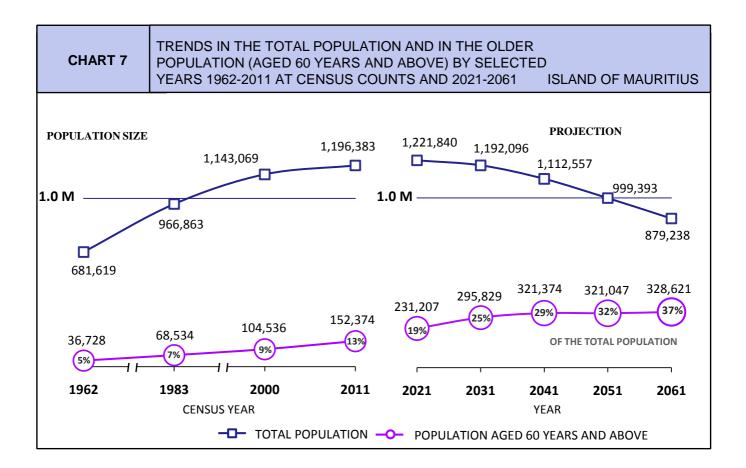

- The ratio of the number of persons aged less than 15 years to the number of persons of working age (i.e. 15-59 years old).
- * The ratio of the number of persons aged 60 years and above to the number of persons of working age (i.e. 15-59 years old).
- □ The ratio of the number of persons aged less than 15 years and the number of persons aged 60 years and above to the number of persons of working age (i.e. 15-59 years old).

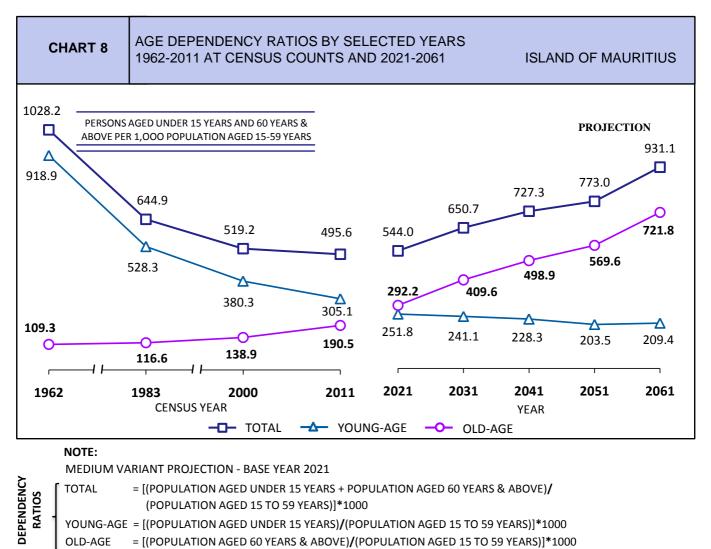

Number of persons of working age (i.e. 15-59 years) for every older person aged 60 years and above.

Number of older persons aged 60 and above per 100 children aged less than 15 years.

NOTE: Percentages in the table do not necessarily add to totals because of rounding.

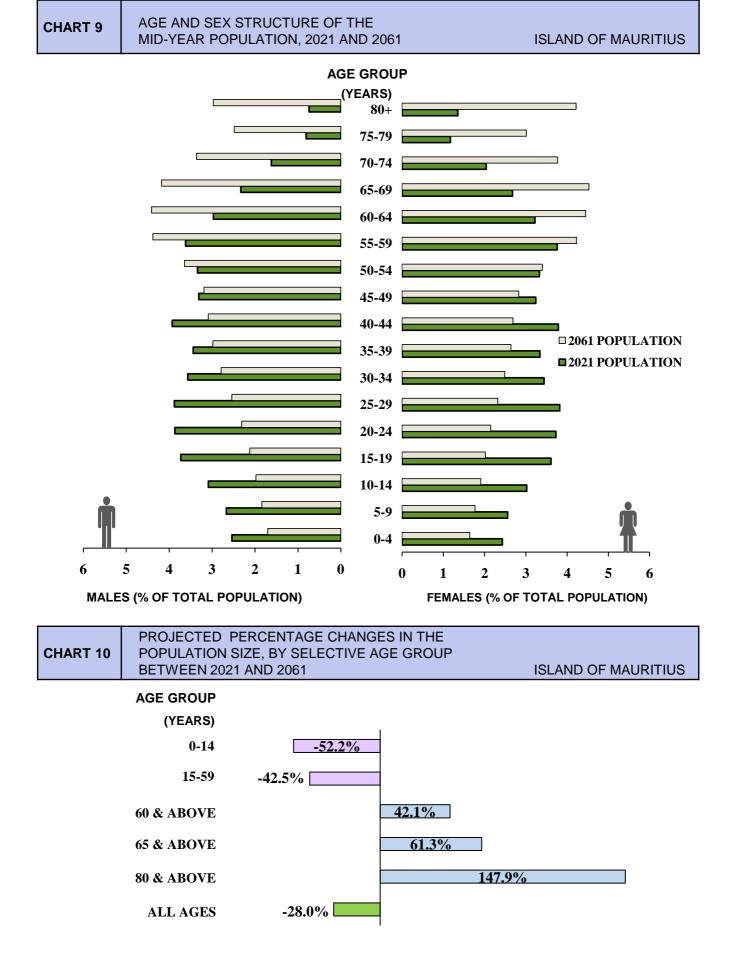

NOTE: DATA IN THE TABLE ARE SHOWN AS THE NUMBER OF DEPENDENTS PER 1,000 POPULATION OF WORKING AGE.

Medium variant projection - base year 2021

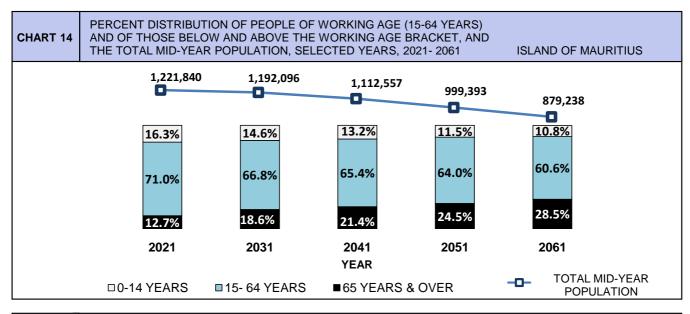

- The ratio of the number of persons aged less than 15 years to the number of persons of working age (i.e. 15-64 years old).
- * The ratio of the number of persons aged 65 years and above to the number of persons of working age (i.e. 15-64 years old).
- □ The ratio of the number of persons aged less than 15 years and the number of persons aged 65 years and above to the number of persons of working age (i.e. 15-64 years old).

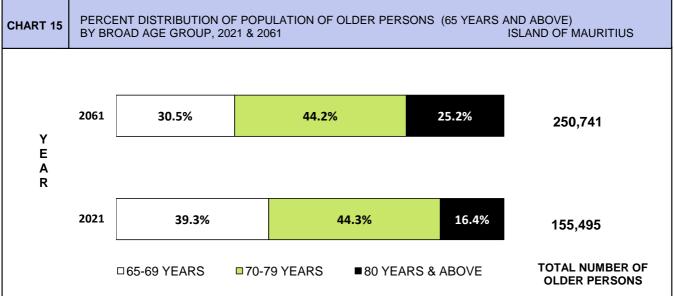

Number of persons of working age (i.e. 15-64 years) for every elderly person aged 65 years and above.

Number of elders aged 65 and above per 100 children aged less than 15 years.

NOTE: Percentages in the table do not necessarily add to totals because of rounding.

NOTE: DATA IN THE TABLE ARE SHOWN AS THE NUMBER OF DEPENDENTS PER 1,000 POPULATION OF WORKING AGE.

SOURCE: STATISTICS MAURITIUS

* RATES ARE BASED ON A SMALL NUMBER OF EVENTS (<30)

NOTE:

 In calculating the rates, live births occurring to mothers less than 15 years have been included in the age group (15-19) whilst those occurring to mothers aged 50 years and above in the age group (45-49). Births for age "Not stated" and birth order "Not stated" have been prorated.

NUMBER OF LIVE BIRTHS OF A SPECIFIC ORDER IN A GIVEN AGE GROUP PER 1,000 WOMEN IN THE SAME AGE GROUP (For example, there were 15.0 live births of order 2 per 1,000 women aged 20-24 years in 2021)

FERTILITY RATES BY LIVE BIRTH ORDER

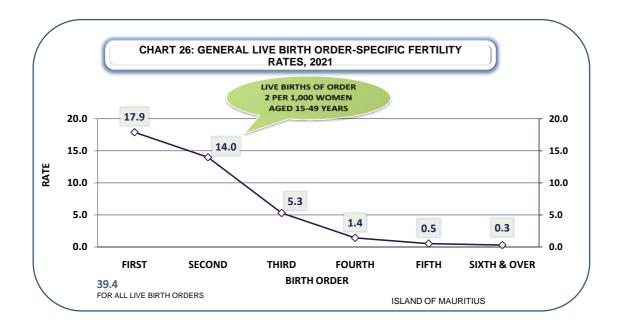

NUMBER OF LIVE BIRTHS OF A SPECIFIC ORDER PER 1,000 WOMEN AGED 15-49 YEARS (For example, there were 14.0 live births of order 2 per 1,000 women aged 15-49 years in 2021) TABLE B.12

* Talks are delivered by Community Health Care Officers and Senior Community Health Care Officers.

Source: Primary Health Care Division of the Ministry of Health and Wellness

 ^{*} In 2020, the number of talks has dropped significantly due to the threats of the Covid-19 pandemic.
 It is also to be noted that no talks were carried out during the lockdown period in the Year 2020.
 Lockdown period due to Covid-19 Pandemic: 20 March 2020 - 30 May 2020 & 10 March 2021 - 30 April 2021.

APPENDIX III	NUMBER OF GOVERNMENT FAMILY PLANNING (FP) SERVICE POINTS BY HEALTH REGION AS AT 31 st DECEMBER 2021 ISLAND OF MAURITIUS	
--------------	---	--

HEALTH REGION/ REGIONAL HOSPITAL	ESTIMATED MID-YEAR POPULATION IN 2021	COMMU- NITY HOSPITAL AND MEDI- CLINICS	AREA HEALTH CENTRE* (AHC)	COMMU- NITY HEALTH CENTRE (CHC)	FAMILY HEALTH CLINIC (FHC)	FAMILY PLANNING CLINIC (FPC)	INDUS- TRIAL FAMILY SUPPLY CENTRE (IFPSC)	NUMBER OF GOVERN- MENT FAMILY PLANNING SERVICE POINTS ^{\$}
HEALTH REGION 1 (DR. A. G. JEETOO HOSPITAL)	314,684	1	5	22	1	-	1	30
HEALTH REGION 2 (SSRN HOSPITAL)	226,298	2	2	28	-	1	-	33
HEALTH REGION 3 (DR. BRUNO CHEONG HOSPITAL)	165,704	1	5	28	-	-	-	34
HEALTH REGION 4 (JAWAHARLALL NEHRU HOSPITAL)	180,419	1	4	16	1	1	2	25
HEALTH REGION 5 (VICTORIA HOSPITAL)	334,735	2	5	21	-	1	-	29
TOTAL	1,221,840	7	21	115	2	3	3	151

There are 6 Medi Clinics and 1 Community Hospital. The latter is located in Health Region 5. Floreal Mediclinic has been operating since 30 January 2020. Previously, it was a CHC.

*Petite Riviere AHC has been operating since 06 February 2020. Previously, it was a CHC.

• For the list of government family planning service points, refer to Appendix II (pp. 87-91) and for the list of services offered refer to Appendix IV (pp. 95-97).

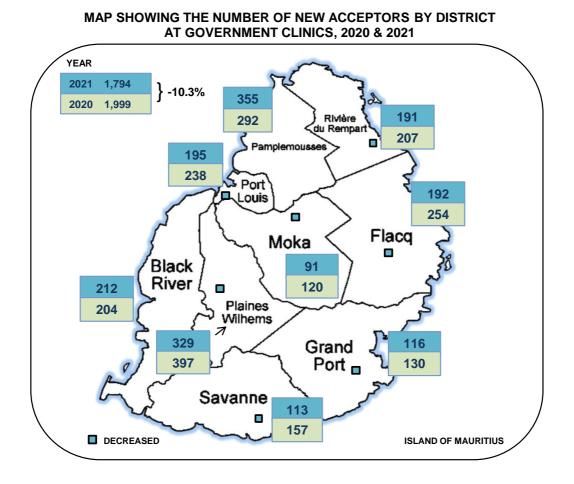

APPENDIX IV	MEDICAL SERVICES AVAILABLE AT THE HEALTH CENTRES REPUBLIC OF MAURITIUS
MEDI CLINIC	Basic Health Services; Family Planning Services; Maternal and Child Health Services; Vaccination; Well-Baby Clinic; Non-Communicable Diseases Clinic; Community-Based Rehabilitation; Pharmacy Services; HIV/AIDS; Health Education; Diabetes Clinic; Ultra Sound for ANC; Dental Services; Public Health Services; Radiology Services; and Laboratory Services.
AREA HEALTH CENTRE (AHC)	Basic Health Services; Family Planning Services; Maternal and Child Health Services; Vaccination; Well-Baby Clinic; Non-Communicable Diseases Clinic; Community-Based Rehabilitation; Pharmacy Services; HIV/AIDS; Health Education; Diabetes Clinic; Ultra Sound for ANC; Dental Services; and Public Health Services.
COMMUNITY HEALTH CENTRE (CHC)	Basic Health Services; Family Planning Services; Maternal and Child Health Services; Vaccination; Well-Baby Clinic; Non-Communicable Diseases Clinic; Community-Based Rehabilitation; Pharmacy Services; and Health Education with Community Participation. May also have Dental Services.
FAMILY HEALTH CLINIC (FHC)	Family Planning Services; Maternal and Child Health Services; Well- Baby Clinic; Health Education; and Vaccination.
FAMILY PLANNING CLINIC (FPC)	Family Planning Services and Health Education.
FAMILY PLANNING SUPPLY CENTRES (FPSC)	Supply of Pills and Condoms.
MOBILE FAMILY HEALTH CLINIC	Family Planning, Maternal and Child Health Services with Doctor.
MOBILE FAMILY HEALTH SERVICES	Family Planning, Maternal and Child Health Services without Doctor.
INDUSTRIAL FAMILY PLANNING SUPPLY CENTRE (IFPSC)	Supply of Pills and Condoms and Health Education in Industries.

Glossary

Population

Census	The total process of collecting, compiling and publishing data on the demographic, social and economic situation of all persons in a specified territory at a particular time. Decennial censuses are usually the norm.
De facto population	A population enumerated or estimated on the basis of those present at a particular time, including temporary visitors but excluding residents temporarily absent.
De jure population	A population enumerated or estimated on the basis of normal residence, excluding temporary visitors but including residents temporarily absent.
Density of population	A ratio of the number of people to the area of land that they occupy usually given as number of persons per square kilometer of area.
Natural increase	The excess of births over deaths.
Rate of natural increase	The difference between births and deaths occurring in a year per 1000 mid-year population. This rate is the difference between the 'crude birth rate' and the 'crude death rate'.
Population growth	The change in population size due to the three demographic processes, namely births, deaths, and migration.
Net external migration	The difference between international departure and arrivals of residents.

Age structure

Sex ratio	The number of males per 100 females in a population.
Total dependency ratio	The combined child population (below 15 years) and older population (aged 60 years and above) per 1,000 population of working age (i.e. 15-59 years).
Young-age dependency ratio (per 1000)	The ratio of the number of persons aged less than 15 years to the number of persons of working age (i.e. 15-59 years old).
Old-age dependency ratio (per 1000)	The ratio of the number of persons aged 60 years and above to the number of persons of working age (i.e. 15-59 years old).
Median age	The age that divides a population in two parts of equal size: i.e., there are as many persons with ages above the median age as there are with ages below the median age.
Population pyramid	A graphic that portrays the age-sex distribution of the population.

Fertility

- Crude birth rate The number of live births registered in a year per thousand estimated mid-year population.
- Fertility The childbearing performance of individuals, couples, groups or populations. It is contrasted with FECUNDITY, the theoretical capacity which may or may not lead to fertility.
- General fertility rate The number of live births occurring in a year per thousand estimated mid-year female population in their childbearing age (15-49 years).
- Age-specific fertility rate The number of live births occurring to women of a specific age group per year, normally expressed per 1,000 women in the same age group. Five-year age groups from 15-19 to 45-49 are most commonly used.
- Total fertility rate The average number of *children* that would be born to a woman assuming that she survives to the end of her childbearing age and is subjected to a fixed schedule of age-specific fertility rates.
- Gross reproduction rate The average number of *daughters* that would be born to a woman assuming that she survives to the end of her childbearing age and is subjected to a fixed schedule of *age-specific fertility rates*. This is similar to the total fertility rate except that the gross reproduction rate counts only daughters.
- Net Reproduction Rate The average number of *daughters* that would be born to a woman during her lifetime if she passed through all her childbearing years conforming to a fixed schedule of *age-specific fertility rates and age-specific mortality rates.* The net reproduction rate is closely related to gross reproduction rate employing the same data on fertility but also indicating the effects of mortality.
- Replacement level fertility The level of fertility at which a population exactly replaces itself from one generation to the next and it is taken to be an average of 2.1 children per woman. Alternatively, a net reproduction rate of 1.0 denotes replacement level fertility; the women are having just enough daughters to "replace" themselves in the population.
- Mean age of The average age of mothers at the time of birth
- Live birth order The ordinal number of a given live birth in relation to all previous live births of the same woman.

Nuptiality

Childbearing

- Marriage rate The annual number of men and women marrying per thousand mid-year population
- Divorce rate The annual number of men and women divorcing per thousand mid-year population.

Mortality

Crude death rate The number of deaths in a year per thousand estimated mid-year population. Infant deaths The number of deaths occurring to children less than one year of age (0-364 days). Infant mortality rate The number of infant deaths in a year per 1,000 live births in the same year. Child mortality rate The number of deaths of children aged between one year and five years (1-4 years) in a year per 1,000 mid-year population aged between one year and five years (1-4 years) in the same year. Under five mortality rate The number of deaths of children aged under five years (0-4 years) in a year per 1,000 live births in the same year. Still birth The expulsion or extraction from the mother of a dead foetus after the time at which it would normally be presumed capable of independent extra uterine existence. This is taken to be at or after 28 weeks duration of pregnancy. Still birth rate The number of still births in a year per 1,000 total births (live births and still births). Early neonatal mortality rate The number of deaths of infants under one week (0-6 days) of age in a year per 1,000 live births in the same year. Late neonatal mortality rate The number of deaths of infants aged between one week and four weeks (7-27 days) in a year per 1,000 live births in the same year. Neonatal mortality rate The number of deaths of infants aged under four weeks (0-27 days) in a year per 1,000 live births in the same year. Post neonatal mortality rate The number of deaths of infants aged between four weeks and one year (28-364 days) in a year per 1,000 live births in the same year. Perinatal mortality rate The sum of the number of deaths of children aged under 7 days and the number of still births in a year per 1,000 total births (live births and still births) in the same year. Maternal mortality Mortality from causes connected with pregnancy, labour or the purperium (lying-in period). Maternal mortality ratio Number of deaths connected with pregnancy, labour or the purperium divided by the number of live births and expressed per 1000 or 100,000. Life expectancy at birth The average number of years a newborn can expect to live based on

the mortality conditions at the time.

Family Planning Clients & Activities

New acceptor	Someone who accepts a contraceptive method for the first time from a provider of a family planning programme.
Current User	A new acceptor who continues with the same or different method of contraception and pays regular return visits to the family planning service point to receive services and supplies.
Drop out	A current user who does not show up at scheduled appointment or thereafter within a defined period (according to the contraceptive method) for services and contraceptive resupplies at a family planning service point.
Drop out returnee	A client who starts receiving again the services and supplies available at the family planning service point after temporarily failing to pay return visits at the service point.
Canvassing	The purpose of canvassing is to seek potential clients who will benefit from information and services at a family planning service point.
Follow-Up	The purpose of follow ups is to remind clients that they have missed a scheduled appointment and to encourage them to make a return visit to the family planning service point.
Session	Field visits made by community health worker for canvassing and follow-ups.

Organisations and Acronyms

ACTION FAMILIALE (A. F.) Action Familiale, a non-governmental organisation, was established in 1963 at the initiative of Mgr J. Margeot, then Vicar General of the Mauritian Catholic Diocese. Besides, promoting sympto-thermal, which is a modern natural family planning method, Action Familiale provides a wide range of services which includes counselling services to couples and youth.

- MAURITIUS FAMILY PLANNING & WELFARE ASSOCIATION (MFPWA) The MFPWA, a non-governmental organisation, was set up in 1957 by some volunteers who believed that the rampant population growth rate would hinder social and economic development in Mauritius. The MFPWA promotes modern methods of contraception and is involved in many family planning, women empowerment and advocacy related activities.
- MATERNAL AND CHILD HEALTH/ FAMILY PLANNING (MCH/FP) The Ministry of Health and Wellness administers the Maternal and Child Health/Family Planning Programme which promotes reproductive health. The Family Planning Programme was integrated with the Maternal and Child Health Services in 1972. Family planning services are available, free of user cost, through a network of health service points.

11 JULY, WORLD POPULATION DAY 2022

A WORLD OF 8 BILLION: TOWARDS A RESILIENT FUTURE FOR ALL - HARNESSING OPPORTUNITIES AND ENSURING RIGHTS AND CHOICES FOR ALL

M In 2011, the world reached a population of 7 billion. This year, the number will hit 8 billion, prompting the attendant responses. Some will marvel at the advancements in health that have extended lifespans, reduced maternal mortality and child mortality and given rise to vaccine development in record time. Others will tout technological innovations that have eased our lives and connected us more than ever. Still others will herald gains in gender equality. But progress is not universal, throwing inequality into razor-sharp relief. Women are still dying in childbirth. Gender gaps remain entrenched. The digital divide leaves more women and those in developing countries offline. More recently, COVID-19 vaccines remain unevenly distributed. For the first time in history, we are seeing extreme diversity in the mean age of countries and the fertility rates of populations. While the populations of a growing number of countries are ageing and about 60 per cent of the world's population live in countries with below-replacement fertility of 2.1 children per woman, other countries have huge youth populations and keep growing apace. According to the United Nations Department of Economic and Social Affairs, "Even though the pace of global population growth will continue to decline in the coming decades, the world population is likely to be between 20 and 30 per cent larger in 2050 than in 2020. Having accurate estimates of population trends and reliable forecasts of future changes, including for the size of populations and their distributions by age, sex and geographical location, is required for policy formulation and implementation and as a quide to assist countries in following a path towards sustainable development." In an ideal world, 8 billion people means 8 billion opportunities for healthier societies empowered by rights and choices. But the playing field is not and has never been even. Based on gender, ethnicity, class, religion, sexual orientation, disability and origin, among other factors, too many are still exposed to discrimination, harassment and violence. We do ourselves no favors when neglecting those left behind. Source: United Nations Population Fund (UNFPA) **DEMOGRAPHIC/EVALUATION UNIT** MINISTRY OF HEALTH AND WELLNESS
