

FAMILY PLANNING AND DEMOGRAPHIC YEARBOOK 2022

VOLUME 48 DECEMBER 2023

DEMOGRAPHIC/EVALUATION UNIT MINISTRY OF HEALTH AND WELLNESS

PREFACE

The Family Planning and Demographic Yearbook presents data on population trends and

family planning use and accessibility, amongst others, for both Island of Mauritius and Island

of Rodrigues. This yearbook is intended for planners, policy makers, and the general public.

The data presented in the yearbook has been obtained from the different departments of this

Ministry (the Primary Health Care Division, the Health Statistics Unit, the Health Records

Division, and the Human Resource Section) as well as from Statistics Mauritius and the non-

governmental organisations, namely Mauritius Family Planning and Welfare Association and

Action Familiale.

The yearbook has been published by the Demographic/Evaluation Unit of the Ministry of

Health and Wellness, which is responsible for monitoring and evaluating the national family

planning programme, and its present issue is the forty-eighth volume.

Special thanks go to the staff of the Demographic/Evaluation Unit of this Ministry for their

assistance in the compilation of this yearbook and to the staff of other departments and

organisations for providing statistics that have been published in this yearbook.

ISLAND OF MAURITIUS

LIST OF TABLES POPULATION

A.1	Population at census date: for both sexes and by sex; the sex ratio, the population	
	density; and the annual intercensal growth rate, 1846-2022	1
A.2	Population enumerated at census dates by marital status and sex, 2000 and 2011	3
A.3	Percent distribution of currently and ever married female population at census dates	4
A.4	Estimated mid-year resident population by age group and sex, 2021 and 2022	5
A.5	Estimated end-year resident population by district & sex, 2020-2022	7
A.6	Population growth and vital statistics, 1993-2022	8
A.7	Life expectancy by age and sex, selected years	9
A.8	Projection of the resident population by sex, 2022-2042	10
A.9	Projection of the resident population by sex, 2047-2062	11
A.10	Distribution of the resident population at census years by selected age group,	
	age indicators, dependency ratios (based on age 60 and over), and ageing index,	
	census years, 1962-2011	13
A.11	Distribution of the resident mid-year population by selected age group, age	
	indicators, dependency ratios (based on age 60 and over), and ageing index,	
	selected years, 2022-2062	14
A.12	Distribution of the resident population at census years by selected age group, age	
	indicators, dependency ratios (based on age 65 and over), and ageing index,	
	census years, 1962-2011	18
A.13	Distribution of the resident mid-year population by selected age group, age	
	indicators, dependency ratios (based on age 65 and over), and ageing index,	40
	selected years, 2022-2062	19
	VITAL STATISTICS	
B.1	Population and vital statistics rates, 1936-2000	21
B.2	Population and vital statistics rates, 2001-2022	22
B.3	Still births, perinatal, neonatal, infant and maternal deaths, 1988-2022	25
B.4	Crude birth rate by district, 1972, 1983, 1990, 2000, 2011, 2013-2022	27

A SUMMARY ON THE DEMOGRAPHIC AND FAMILY PLANNING STATISTICS

A summary of the statistics presented in the 2022 Family Planning and Demographic Yearbook is given in this section. The 2022 Yearbook is the forty-eighth volume and provides statistics for Island of Mauritius and Island of Rodrigues on demography as well as on family planning for the government and the two non-governmental organisations, namely Mauritius Family Planning and Welfare Association and Action Familiale. The tables and charts in this volume have been grouped under the following headings: population, vital statistics, and family planning.

ISLAND OF MAURITIUS

CENSUS

The last two population censuses have been carried out in July 2011 and 2022, and the de jure¹ counts revealed that there were 1,196,383 inhabitants in 2011 and 1,191,280 inhabitants in 2022. The population density has decreased from 642 inhabitants per square kilometre in 2011 to 638 in 2022 (Table A.1). Moreover, it is noted that the average annual population growth rate has decreased from 0.42% for the intercensal period 2000-2011 to -0.04 % for the intercensal period 2011-2022.

POPULATION SIZE², GROWTH AND DISTRIBUTION

The estimated resident population was 1,217,588 as at 1st July 2022, thus showing a decrease of 0.35% since 1st July 2021 (*Table A.4*). Moreover, the estimated mid-year population in 2022 shows that there were more females than males: 615,626 females and 601,962 males.

¹ A population enumerated on the basis of normal residence, excluding temporary visitors but including residents temporarily absent, and the 2022 population census figures are provisional. and the estimates for the resident population are based on the 2011 Census.

² The estimates for the resident population are based on the 2011 Census.

In 2022, an estimate of 41.5% of the population lived in urban areas and 58.5% lived in rural areas.

SEX RATIO

The sex ratio is a measure used to describe the balance between males and females in a population. In 2022, the sex ratio of the total population was 97.8 males per 100 females.

Due to the 'female survival advantage' in life expectancy, there are more females in the older age groups than in the younger age groups, and the gap increases with age. For instance, in 2022, there were 80.9 men per 100 women in the age group 60 and above and 55.5 men per 100 women in the age group 80 and above (*Chart 4*).

CHANGING AGE STRUCTURE

The population of Mauritius is ageing due to sustained low fertility level and increasing life expectancy, which in turn is resulting to lower proportion of children and higher proportion of elders in the population. The ageing index shows that there were about 123 older persons aged 60 years and above for every 100 children younger than 15 years old in 2022. Hence, as the population is growing older, Mauritius is witnessing a change in its age structure.

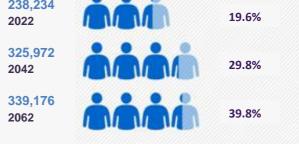

The share of the population aged 60 years and above in the total mid-year population has increased from 9.1% in 2000 to 19.6% in 2022, and it is projected³ to increase to 29.8% in 2042 and 39.8% in 2062 (Chart 11).

AND ABOVE IN 2022, 2042 AND 2062

2022

19.6%

NUMBER AND PROPORTION OF PERSONS AGED 60 YEARS

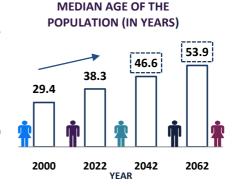

SHARE IN THE TOTAL MID-YEAR POPULATION

Family Planning and Demographic Yearbook 2022, Ministry of Health and Wellness

³ Medium variant projection based on 2022 population.

Conversely, the share of the population aged 0-14 years in the total mid-year population has decreased from 25.0% in 2000 to 16.0% in 2022, and it is projected to decrease to 12.3% in 2042 and 9.8% in 2062. It is also noted that the share of the population aged 15-59 years has decreased slightly (from 65.8% of the total mid-year population in 2000 to 64.5% in 2022), and it is projected to decrease to 57.9% in 2042 and 50.4% in 2062.

Changes in the age structure are also reflected in the median age of the population; 50% of the population is older than this age and 50% is younger. The median age of the population has increased from 29.4 years in 2000 to 38.3 years in 2022, and it is projected to increase to 46.6 years in 2042 and 53.9 years in 2062.

Mauritius is also witnessing a progressive ageing of its older population. The share of persons aged 80 years or older in the population aged 60 years and above is projected to increase from 10.6% in 2022 to 21.2% in 2062 (Chart 12). In other words, approximately 1 in 9 persons aged 60 years and above was 80 years or older in 2022, and this ratio is projected to be approximately 1 in 5 in 2062.

Population pyramids are useful in examining the age-sex structure of a population. The juxtaposed population pyramids for year 2022 and 2062 show that due to the projected rise in the number and proportion of old people in the population, the apex of the 2062 pyramid is broader than that of the 2022 pyramid (*Chart 9*). Moreover, based on the projected changes in the age structure, there will be an increasingly demand for healthcare services for the older persons.

Another ramification of the changes in the age distribution is that the total dependency ratio will continue to increase. The total dependency ratio compares the number of dependents (children aged *0-14 years* and older persons aged *60 years and above*) to the number of persons of working age (i.e. *15-59 years*); a higher ratio indicates a higher burden on the working age population. The total dependency ratio has increased from 519.2 dependents per 1000 persons of working age in 2000 to 551.3 in 2022, and it is projected to increase to 727.8 in 2042 and 984.0 in 2062 (*Table A.11*).

WOMEN IN THE REPRODUCTIVE AGE GROUP (15-49 YEARS)

The number and proportion of women in the reproductive age group (15-49 years) are important demographic factors to consider in a sexual and reproductive health (including family planning) programme. The share of women in the reproductive age group (15-49 years) in the total mid-year female population was 49.3% in 2022, and it is projected to decrease to 41.4% in 2042 and 32.7% in 2062 (Chart 13).

LIFE EXPECTANCY

Life expectancy at birth has improved considerably and is expected to improve further over the years. It increased from 69.3 years in 1989-1991 to 73.4 years in 2020-2022 (Table A.7). Likewise, female life expectancy at birth increased from 73.4 years in 1989-1991 to 77.1 years in 2020-2022 and male life expectancy at birth increased from 65.6 years in 1989-1991 to 70.0 years in 2020-2022. WOMEN ARE LIVING LONGER THAN MEN

LIFE EXPECTANCY AT BIRTH (IN YEARS) 2020-2022 77.1 **BOTH SEXES**

Life expectancy at birth is higher for females than for males but the gap between male and female life expectancy at birth is narrowing. The above-mentioned figures show that a girl born in 1989-1991 could expect to live 7.8 years longer than a boy born in the same period, and for a girl born in 2020-2022, she could expect to live 7.1 years longer.

Life expectancy at age 60 for the total population was 19.9 years in 2020-2022, and women aged 60 years in 2020-2022 could expect to live an additional 21.8 years, compared with 18.0 years for men aged 60 years in the same period.

VITAL STATISTICS

The country has recorded more deaths than births indicating a negative natural increase of the population. In 2022, there were 11,223 live births and 12,581 deaths. Moreover, it is noted that there were 885 less live births and 409 less deaths in 2022 than in 2021 (Table B.2).

The crude birth rate has declined from 10.7 births per 1,000 mid-year population in 2013 to 9.2 in 2022, and the crude death rate has increased from 7.6 deaths per 1,000 mid-year population in 2013 to 10.3 in 2022. Hence, the rate of natural increase was 3.1 in 2013 and -1.1 in 2022. Moreover, it is noted that the crude birth rate for the five-year period has declined, from 10.3 in 2013-2017 to 9.9 in 2018-2022. As for the crude death rate, it has fluctuated between 7.6 and 10.6 during the period of 2013-2022.

There were 165 infant deaths (deaths under 1 year of age) that were registered in 2022. The infant mortality rate, which is the number of infant deaths in a year per 1,000 live births, is often used as a proxy measure of the overall health of the population. The infant mortality rate has increased from 12.2 deaths per 1,000 live births in 2013 to 14.7 in 2022, thus showing in a rise of 20.5%. Moreover, it is to be noted that the infant mortality rates for the five-year period has increased from 12.7 in 2013-2017 to 14.2 in 2018-2022.

Neonatal deaths (deaths of babies under 28 days of age) accounted for 61.8% of all infant deaths in 2022. The neonatal mortality rate, which is the number of neonatal deaths in a year per 1,000 live births, is a key outcome indicator for newborn care and directly reflects prenatal, intrapartum, and neonatal care. During the period of 2013-2022, the neonatal mortality rate has fluctuated between 7.6 and 10.5 deaths per 1,000 live births; in 2022, this rate was 9.1.

The number of still births was 105 in 2022 compared with 121 in 2021. The still birth rate, which is the number of still births in a year per 1,000 total births, has fluctuated between 8.7 and 10.7 during the period of 2013-2022. In 2022, the still birth rate was 9.3.

The under-five mortality rate is a leading indicator of child health and overall human development. The under-five mortality rate (deaths of children under five years of age per 1,000 live births) has increased from 14.6 in 2013 to 17.0 in 2022, thus showing a rise of 16.4%. Moreover, the data shows that the under-five year mortality rate for the five-year period has increased, from 14.6 in 2013-2017 to 15.9 in 2018-2022.

There has been a marked improvement in maternal health in the twentieth century (*Table B.3*). For instance, the maternal mortality ratio declined from 0.45 maternal deaths per 1,000 live births in 1988 to 0.15 in 2000.

Factors such as strengthening and expanding the maternal and child health services, accessibility to family planning services, and contraceptive use have been associated with this declining trend.

In 2022, the maternal mortality ratio was 0.36 maternal deaths per 1,000 livebirths (or 36 maternal deaths per 100,000 live births). It is noted that the maternal mortality ratio (i.e. maternal deaths per 1,000 live births) has fluctuated between 0.33 and 0.79 during the ten-year period of 2013 to 2022. As part of the renewed commitment from the government to improve further the reproductive health indicators, policies and strategies have been formulated and are being implemented.

VITAL STATISTICS BY DISTRICT⁴

In 2022, the crude birth rates ranged from 7.2 in Flacq to 13.0 in Port Louis (*Table B.4*). Three districts had higher rates (Port Louis, Pamplemousses, and Black River) than the national level of 9.2.

In 2022, the crude death rates ranged from 7.7 in Black River to 13.1 in Port Louis (*Table B.5*). Three districts had higher rates (Port Louis, Grand Port, and Plaines Wilhems) than the national level of 10.3.

In 2022, the still birth rates ranged from 5.0 in Rivière du Rempart to 14.3 in Port-Louis (*Table B.6*). Six districts had higher rates (Port Louis, Pamplemousses, Grand-Port, Savanne, Moka and Black River) than the national level of 9.3.

In 2022, the infant mortality rates ranged from 10.1 in Rivière du Rempart to 20.9 in Black River (*Table B.7*). Four districts had higher rates (Port Louis, Grand Port, Savanne and Black River) than the national level of 14.7.

⁴ Island of Mauritius is divided into nine districts (see map).

FERTILITY

There has been a remarkable decline in fertility in the past few decades as measured by the total fertility rate. The total fertility rate is the average number of babies that a woman could expect to bear if current fertility rates prevail throughout her reproductive lifetime. The total fertility rate dropped sharply from 5.86 children per woman in 1962 to 3.42 in 1972 and continued to drop further thereafter.

The total fertility rate dropped below the replacement-level fertility of 2.10 children per woman - the level needed for a woman to replace herself and her partner - for the first time in the mid-1980s; however, it was not until 1997 onward that fertility has continuously been at sub-replacement level. In 2022, the total fertility rate was 1.27

1.27
AT SUB-REPLACEMENT LEVEL
IN 2022

children per woman compared with 1.41 in 2013, resulting in a decrease of 9.9%. Interestingly, it was noted that there was an increase in the total fertility rate from 1.35 in 2019 to 1.40 in 2020 – the year where the Covid-19 pandemic was declared (*Table B.8*). However, the total fertility rate declined to 1.36 in 2021.

In 2022, women in the age-groups 15-19, 20-24 and 25-29 had lower fertility rates than women in the same age groups in 2013 (Table B.9), and the largest percentage decrease in fertility rates were among women aged 20-24 years (34.2%).

Early childbearing increases health risks for both mothers and their newborns. The fertility rate for women aged 15-19 years (adolescent fertility rate) has decreased from 25.7 in 2013 to 19.3 in 2022, resulting in a decline of 24.9%. Even though progress has been made in reducing the fertility rate among adolescents, it is noted that 23 live births occurred to adolescents under 15 years of age in 2022.

In 2022, the age-specific fertility rates showed that women *aged 30-34* years had the *highest* fertility rate (75.0) among all age groups, and that women *aged 25-29 years* (69.2) and women *aged 20-24 years* (45.3) had the *second* and *third* highest fertility rate respectively (*Table B.9*).

The median age of childbearing was 29.5 years in 2021 as well as in 2022.

NUPTIALITY

Island of Mauritius

The 1962 and 1972 censuses showed that the proportion of currently married women in the age group 15-19 declined by slightly more than half, from 27.8% in 1962 to 12.5% in 1972 (*Table A.3*) whilst the average number of children per woman dropped from about 6 to 3 in the same period. Factors that have been linked to this sharp reduction in fertility between 1962 and 1972 include, among others, the postponement of marriage among younger women and contraceptive use. The 2011 census revealed that the proportions of currently married women in the age group 15-19 and 20-24 were 6.3% and 34.8% respectively.

There were 9,386 marriages that were registered in the Island of Mauritius in 2022, and the majority of brides (83.5%) and bridegrooms (83.8%) had never been married before. The crude marriage rate was 15.4 marriages per 1,000 mid-year population in 2022.

The median age of females and males at first marriage was 28.19 years and 31.04 years respectively in the Island of Mauritius in 2022. The median age at first marriage for females has increased by 0.62 years since 2021 and the median age at first marriage for males has increased by 0.66 years since 2021.

The data shows that 2,043 divorces and 2,336 divorces have been granted in 2021 and 2022 respectively in the Island of Mauritius. The crude divorce rate ranged between 2.5 to 3.8 during the period of 2008-2021 (*Chart 18*). In 2022, the crude divorce rate was 3.8 divorces per 1,000 mid-year population. Overall, 82.4% of all couples granted divorce in 2022 had at least one dependent child.

FAMILY PLANNING

Availability

Family planning helps save women's and children's lives by preventing unplanned pregnancies. Family planning services, including contraceptives, have been available to individuals and couples, free of user cost at government health service points since 1968.

The government family planning programme provides a wide range of short-term and long-term contraceptive methods⁵ through a network of health service points.

FAMILY PLANNING BENEFITS

- Advances human rights
- Saves lives
- Prevents HIV/AIDS transmission
- Helps reduce poverty
- Advances gender equality and empowerment
- Supports the achievement of the sustainable development goals (SDGs)

However, availability of family planning services in Mauritius dates back since 1957 when the non-governmental organization (NGO) Mauritius Family Planning and Welfare Association (MFPWA) was set up. The MFPWA family planning programme was then integrated with the government maternal and child health programme in 1972, and thereafter, MFPWA has continued to run a family planning clinic where contraceptive methods and counselling services are offered. Moreover, the NGO Action Familiale, which was established in 1963, has been promoting use of natural family planning methods and has been providing counselling services.

There is a concerted effort between the Government, MFPWA, and Action Familiale to provide family planning services. The national family planning programme has long shifted its focus from achieving demographic targets to improving the reproductive health of the population. However, since its inception, the guiding principle of the family planning programme has been that all couples and individuals have the basic right to decide freely and responsibly the number, spacing, and timing of their children.

infections as well as on preconception care and fertility awareness.

⁵The short-term contraceptive methods are male condom; female condom; pill; 1-month injectable; and 3-month injectable, and the long-term contraceptive methods are implant; IUD; and tubal ligation. Emergency contraceptive pills are also available. It should be pointed out that confidential counselling is an integral component of family planning services. In addition to being counseled on contraception, clients receive information on sexually transmitted

Family Planning Clients⁶

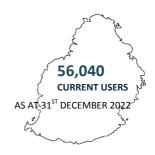

New Acceptors

In 2022, there were 3,063 new acceptors who were registered at the family planning service points of the government, MFPWA, and Action Familiale in the Island of Mauritius (*Table C.1*). This figure includes 507 new acceptors of tubal ligation reported at government hospitals. Three-month injectable was the most preferred method among the new acceptors accounting for 24.2%, followed by pill (19.1%), male condom (18.6%), tubal ligation (16.6%), sympto-thermal (14.3%), implant (3.6%), 1-month injectable (2.4%) and IUD (1.2%).

Current Users

As at 31st December 2022, there were 56,040 current users who were registered at the family planning service points of the government, MFPWA, and Action Familiale in the Island of Mauritius (*Table C.11*). This figure includes 13,791 current users of tubal ligation reported at government hospitals.

FAMILY PLANNING PROGRAMME(GOVERNMENT, MFPWA & ACTION FAMILIALE)

Sympto-thermal was the most preferred method among the current users accounting for 47.5%, followed by tubal ligation (25.4%), male condom (10.9%), pill (5.9%), 3-month injectable (4.9%), IUD (2.8%), implant (1.9%), and 1-month injectable (0.7%).

The yearly average number of current users for the five-year period has decreased from 64,054 in 2013-2017 to 57,153 in 2018-2022 (*Table C.10*), resulting in a decline of 10.8%.

⁶There are different types of family planning clients, and they include new acceptors and current users. A new acceptor is someone who accepts a contraceptive method for the first time from a provider of a family planning programme. A current user is someone who uses a method of contraception that has been obtained from the provider of the family planning programme. It should be pointed out that since the number of family planning clients of female condom in the government is small; it has been excluded in this section (In 2022: 0 new acceptors and 2 current users for Island of Mauritius).

Moreover, the programme-based statistics (for the government, MFPWA, and Action Familiale) shows that 18.5% of women aged 15-49 years were using a contraceptive method in 2022. However, the Contraceptive Prevalence Survey, which was carried out in 2014, showed that higher proportions of women aged 15-49 years(40.9%) and of currently married women aged 15-49 years (63.8%) were using a contraceptive method in the Island of Mauritius. This nationwide survey revealed that women in the reproductive age group 15-49 years were obtaining their contraceptive method either from programme sources (government and NGOs) or from non-programme sources (e.g. pills from pharmacies) or were using non-programme methods (such as withdrawal).

Accessibility and Attendance

Government family planning services are available through an extensive network of health service points, covering the whole island of Mauritius⁷ (*Appendix III*). Presently, there are 151 government family planning service points: 1 Community Hospital; 7 Medi-Clinics; 21 Area Health Centres; 114 Community Health Centres; 2 Family Health Clinics; 3 Family Planning Clinics; and 3 Industrial Family Supply Centres. Hence, in relation to the population size, on average, for every 2,012 women in the reproductive age group (15-49 years), there is 1 government family planning service point.

In 2022, seven family planning clinics provided services after working hours, on Sundays and on public holidays.

There has been a decline in the number of attendances at the government family planning service points from 50,412 in 2019 to 39,473 in 2020 due to the Covid-19 pandemic. In 2022, 37,224 attendances were recorded compared with 36,659 in 2021.

_

⁷ For administrative purposes, five health regions have been established by the Ministry of Health and Wellness.

ISLAND OF RODRIGUES

VITAL STATISTICS

There were 873 live births and 357 deaths that were registered in 2022 (Table F.2). The crude birth rate was 19.5 births per 1,000 mid-year population and the crude death rate was 8.0 deaths per 1,000 mid-year population in 2022. Hence, the rate of natural increase was 11.5 in 2022.

The crude birth rate has increased from 17.1 births per 1,000 mid-year population in 2013 to 20.0 in 2021 and in 2022, it was 19.5.

The infant mortality rate has decreased from 17.0 deaths per 1,000 live births in 2013 to 13.9 in 2021 and in 2022, it was 8.0.

The still birth rate has increased from 8.9 still births per 1,000 total births in 2013 to 9.3 in 2021 and in 2022, it was 6.8.

The total fertility rate has declined from 3.19 children per woman in 1990 to 2.74 in 2021 and in 2022, it was 2.67 (*Table F.3*). In 2022, the age-specific fertility rates showed that women *aged 30-34* years had the *highest* fertility rate (127.5) among all age groups and that women *aged 25-29* years (126.2) had the *second* highest fertility rate (*Table F.4*).

FAMILY PLANNING

Family Planning Clients⁸

New Acceptors

In 2022, there were 329 new acceptors who were registered at the family planning service points of the government, MFPWA, and Action Familiale in the Island of Rodrigues (*Table F.5*).

⁸ Refer to footnote 5 for types of family planning clients. It should be pointed out that since the number of family planning clients of female condom in the government is small; it has been excluded in this section (In 2022: 0 new acceptors and 0 current users for Island of Rodrigues).

The most preferred method among the new acceptors was 3-month injectable, accounting for 37.4%, followed by pill (28.0%) and male condom (14.6%).

Current Users

As at 31st December 2022, there were 4,111 current users who were registered at the family planning service points of the government, MFPWA, and Action Familiale in the Island of Rodrigues (*Table F.6*). Pill was the most preferred method among the current users accounting for 27.7%, followed by sympto-thermal (27.5%), male condom (15.6%), 3-month injectable (13.6%), implant (8.3%), IUD (4.0%), and tubal ligation (3.2%).

FAMILY PLANNING PROGRAMME(GOVERNMENT, MFPWA & ACTION FAMILIALE)

Family Planning Service Points

In 2022, there were 15 government family planning service points in the Island of Rodrigues (*Table F.7*). Hence, in relation to the population size, on average, for every 770 women in the reproductive age group (15-49 years), there were 1 government family planning service point.

Attendance

In 2022, a total number of 7,079 attendances have been recorded at the government family planning service points.

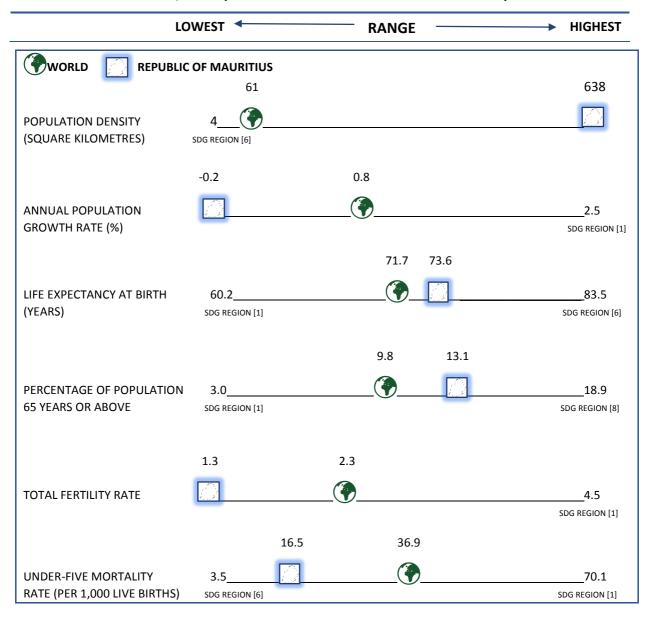

In Brief

- The ratio of the number of persons aged less than 15 years to the number of persons of working age (i.e. 15-59 years old).
- * The ratio of the number of persons aged 60 years and above to the number of persons of working age (i.e. 15-59 years old).

NOTE: DATA IN THE TABLE ARE SHOWN AS THE NUMBER OF DEPENDENTS PER 1,000 POPULATION OF WORKING AGE.

NOTE: Percentages in the table do not necessarily add to totals because of rounding.

The ratio of the number of persons aged less than 15 years and the number of persons aged 60 years and above to the number of persons of working age (i.e. 15-59 years old).

Number of persons of working age (i.e. 15-59 years) for every older person aged 60 years and above.

Number of older persons aged 60 and above per 100 children aged less than 15 years.

Medium variant projection - base year 2022

- The ratio of the number of persons aged less than 15 years to the number of persons of working age (i.e. 15-59 years old).
- * The ratio of the number of persons aged 60 years and above to the number of persons of working age (i.e. 15-59 years old).

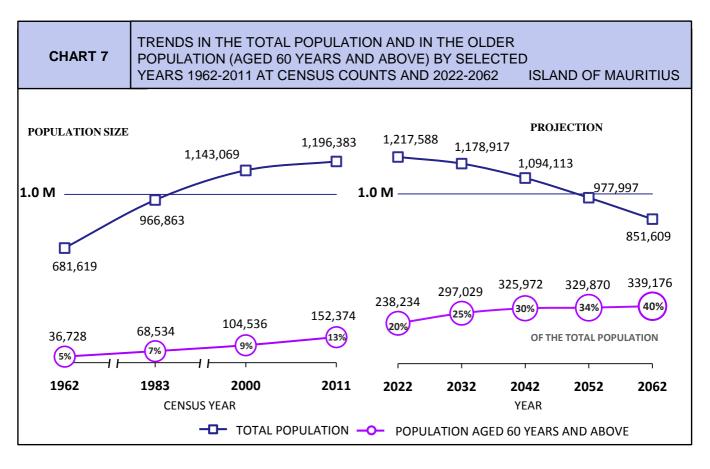

NOTE: DATA IN THE TABLE ARE SHOWN AS THE NUMBER OF DEPENDENTS PER 1,000 POPULATION OF WORKING AGE.

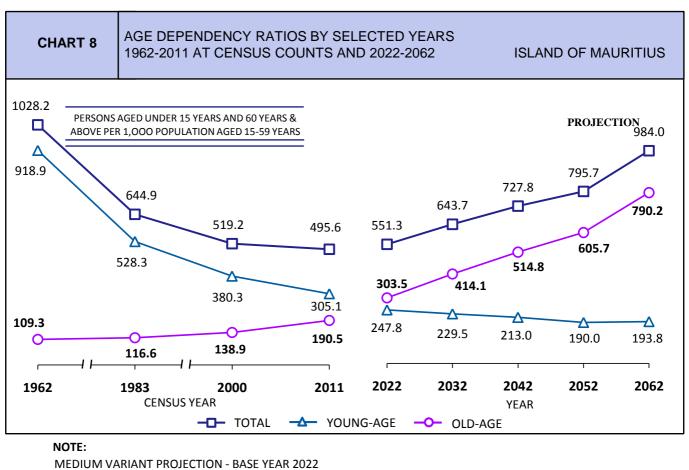

NOTE: Percentages in the table do not necessarily add to totals because of rounding.

The ratio of the number of persons aged less than 15 years and the number of persons aged 60 years and above to the number of persons of working age (i.e. 15-59 years old).

Number of persons of working age (i.e. 15-59 years) for every older person aged 60 years and above.

Number of older persons aged 60 and above per 100 children aged less than 15 years.

YOUNG-AGE = [(POPULATION AGED UNDER 15 YEARS)/(POPULATION AGED 15 TO 59 YEARS)]*1000

(POPULATION AGED 15 TO 59 YEARS)]*1000

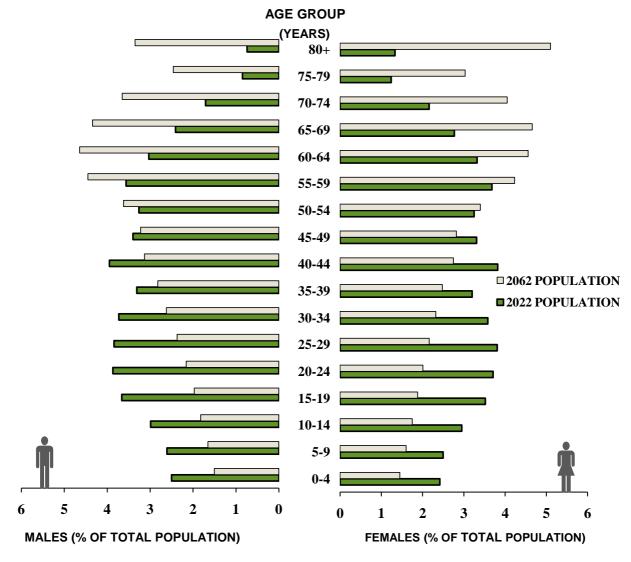

TOTAL

= [(POPULATION AGED UNDER 15 YEARS + POPULATION AGED 60 YEARS & ABOVE)/

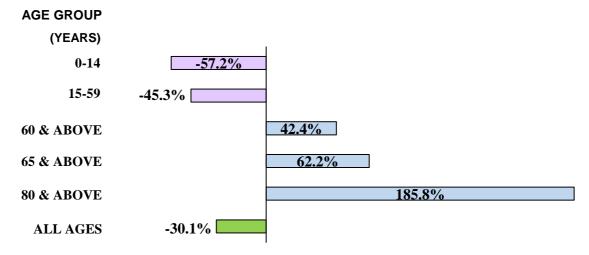

AGE AND SEX STRUCTURE OF THE MID-YEAR POPULATION, 2022 AND 2062

Medium variant projection - base year 2022

- The ratio of the number of persons aged less than 15 years to the number of persons of working age (i.e. 15-64 years old).
- * The ratio of the number of persons aged 65 years and above to the number of persons of working age (i.e. 15-64 years old).

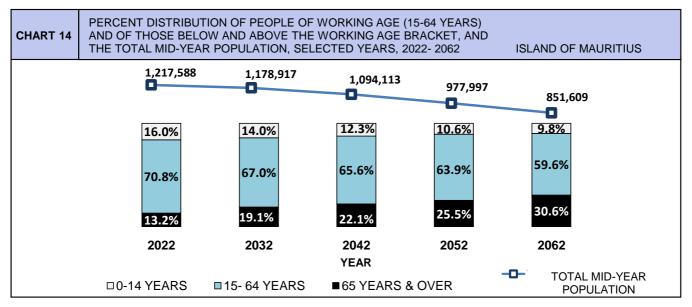

Number of persons of working age (i.e. 15-64 years) for every elderly person aged 65 years and above.

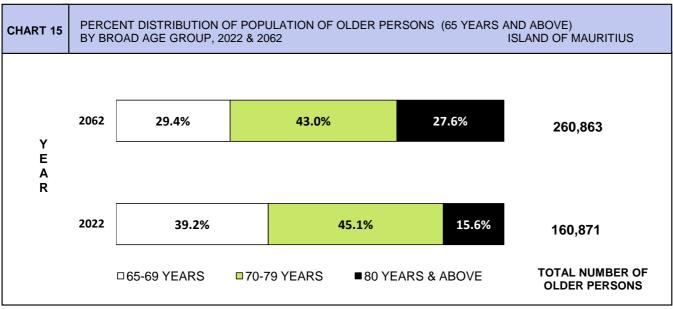

Number of elders aged 65 and above per 100 children aged less than 15 years.

NOTE: Percentages in the table do not necessarily add to totals because of rounding.

NOTE: DATA IN THE TABLE ARE SHOWN AS THE NUMBER OF DEPENDENTS PER 1,000 POPULATION OF WORKING AGE.

The ratio of the number of persons aged less than 15 years and the number of persons aged 65 years and above to the number of persons of working age (i.e. 15-64 years old).

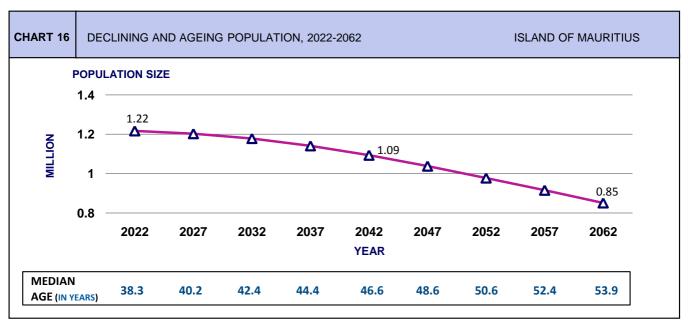

TABLE B.1

SOURCE: STATISTICS MAURITIUS

^{*} RATES ARE BASED ON A SMALL NUMBER OF EVENTS (<30)

NOTE:

(1) In calculating the rates, live births occurring to mothers less than 15 years have been included in the age group (15-19) whilst those occurring to mothers aged 50 years and above in the age group (45-49). Births for age "Not stated" and birth order "Not stated" have been prorated.

FERTILITY RATES BY AGE OF MOTHER AND LIVE BIRTH ORDER

NUMBER OF LIVE BIRTHS OF A SPECIFIC ORDER IN A GIVEN AGE GROUP PER 1,000 WOMEN IN THE SAME AGE GROUP (For example, there were 14.5 live births of order 2 per 1,000 women aged 20-24 years in 2022)

FERTILITY RATES BY LIVE BIRTH ORDER

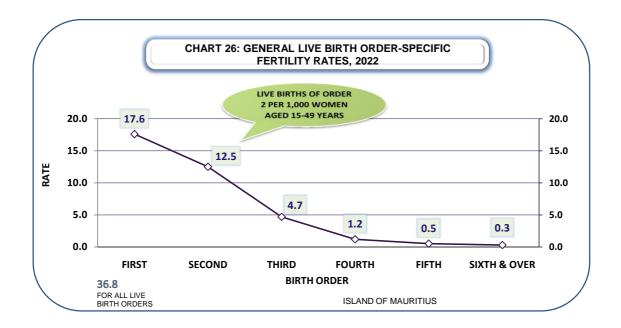

NUMBER OF LIVE BIRTHS OF A SPECIFIC ORDER PER 1,000 WOMEN AGED 15-49 YEARS

(For example, there were 12.5 live births of order 2 per 1,000 women aged 15-49 years in 2022)

^{*} Talks are delivered by Community Health Care Officers and Senior Community Health Care Officers at Government Health Service Points, Community Centres & Secondary Schools.

Source: Primary Health Care Division of the Ministry of Health and Wellness

^{*} In 2020, the number of talks has dropped significantly due to the threats of the Covid-19 pandemic. It is also to be noted that no talks were carried out during the lockdown period in the Year 2020. Lockdown period due to Covid-19 Pandemic: 20 March 2020 - 30 May 2020 & 10 March 2021 - 30 April 2021.

Glossary

Population

Census The total process of collecting, compiling and publishing data on the

demographic, social and economic situation of all persons in a specified territory at a particular time. Decennial censuses are usually the norm.

De facto population A population enumerated or estimated on the basis of those present at a

particular time, including temporary visitors but excluding residents

temporarily absent.

De jure population A population enumerated or estimated on the basis of normal residence,

excluding temporary visitors but including residents temporarily absent.

Density of population A ratio of the number of people to the area of land that they occupy

usually given as number of persons per square kilometer of area.

Natural increase The excess of births over deaths.

Rate of natural increase The difference between births and deaths occurring in a year per 1000

mid-year population. This rate is the difference between the 'crude birth

rate' and the 'crude death rate'.

Population growth The change in population size due to the three demographic processes,

namely births, deaths, and migration.

Net external migration The difference between international departure and arrivals of residents.

Age structure

Sex ratio The number of males per 100 females in a population.

Total dependency ratio The combined child population (below 15 years) and older population

(aged 60 years and above) per 1,000 population of working age (i.e. 15-

59 years).

Young-age dependency

ratio (per 1000)

The ratio of the number of persons aged less than 15 years to the

number of persons of working age (i.e. 15-59 years old).

Old-age dependency

ratio (per 1000)

The ratio of the number of persons aged 60 years and above to the

number of persons of working age (i.e. 15-59 years old).

Median age The age that divides a population in two parts of equal size: i.e., there

are as many persons with ages above the median age as there are with

ages below the median age.

Population pyramid A graphic that portrays the age-sex distribution of the population.

Fertility

Crude birth rate The number of live births registered in a year per thousand estimated

mid-year population.

Fertility The childbearing performance of individuals, couples, groups or

populations. It is contrasted with FECUNDITY, the theoretical capacity

which may or may not lead to fertility.

General fertility rate The number of live births occurring in a year per thousand estimated

mid-year female population in their childbearing age (15-49 years).

Age-specific fertility rate
The number of live births occurring to women of a specific age group per

year, normally expressed per 1,000 women in the same age group. Five-

year age groups from 15-19 to 45-49 are most commonly used.

Total fertility rate The average number of *children* that would be born to a woman

assuming that she survives to the end of her childbearing age and is

subjected to a fixed schedule of age-specific fertility rates.

Gross reproduction rate The average number of daughters that would be born to a woman

assuming that she survives to the end of her childbearing age and is subjected to a fixed schedule of *age-specific fertility rates*. This is similar to the total fertility rate except that the gross reproduction rate counts

only daughters.

Net Reproduction Rate The average number of *daughters* that would be born to a woman during

her lifetime if she passed through all her childbearing years conforming to a fixed schedule of *age-specific fertility rates* and *age-specific mortality rates*. The net reproduction rate is closely related to gross reproduction rate employing the same data on fertility but also indicating the effects of

mortality.

Replacement level fertility The level of fertility at which a population exactly replaces itself from one

generation to the next and it is taken to be an average of 2.1 children per woman. Alternatively, a net reproduction rate of 1.0 denotes replacement level fertility; the women are having just enough daughters

to "replace" themselves in the population.

Mean age of Childbearing

The average age of mothers at the time of birth.

Live birth order The ordinal number of a given live birth in relation to all previous live

births of the same woman.

Nuptiality

Marriage rate The annual number of men and women marrying per thousand mid-year

population.

Divorce rate The annual number of men and women divorcing per thousand mid-year

population.

Crude death rate The number of deaths in a year per thousand estimated mid-year population. Infant deaths The number of deaths occurring to children less than one year of age (0-364 days). Infant mortality rate The number of infant deaths in a year per 1,000 live births in the same year. Child mortality rate The number of deaths of children aged between one year and five years (1-4 years) in a year per 1,000 mid-year population aged between one year and five years (1-4 years) in the same year. Under five mortality rate The number of deaths of children aged under five years (0-4 years) in a year per 1,000 live births in the same year. Still birth The expulsion or extraction from the mother of a dead foetus after the time at which it would normally be presumed capable of independent extra uterine existence. This is taken to be at or after 28 weeks duration of pregnancy. Still birth rate The number of still births in a year per 1,000 total births (live births and still births). Early neonatal mortality rate The number of deaths of infants under one week (0-6 days) of age in a year per 1,000 live births in the same year. Late neonatal mortality rate The number of deaths of infants aged between one week and four weeks (7-27 days) in a year per 1,000 live births in the same year. Neonatal mortality rate The number of deaths of infants aged under four weeks (0-27 days) in a year per 1,000 live births in the same year. Post neonatal mortality rate The number of deaths of infants aged between four weeks and one year (28-364 days) in a year per 1,000 live births in the same year. Perinatal mortality rate The sum of the number of deaths of children aged under 7 days and the number of still births in a year per 1,000 total births (live births and still births) in the same year. Maternal mortality Mortality from causes connected with pregnancy, labour or the purperium (lying-in period). Maternal mortality ratio Number of deaths connected with pregnancy, labour or the purperium divided by the number of live births and expressed per 1000 or 100,000.

the mortality conditions at the time.

The average number of years a newborn can expect to live based on

Life expectancy at birth

Family Planning Clients & Activities

New acceptor Someone who accepts a contraceptive method for the first time from a

provider of a family planning programme.

Current User A new acceptor who continues with the same or different method of

contraception and pays regular return visits to the family planning service

point to receive services and supplies.

Drop out A current user who does not show up at scheduled appointment or

thereafter within a defined period (according to the contraceptive method) for services and contraceptive resupplies at a family planning service

point.

Drop out returnee A client who starts receiving again the services and supplies available at

the family planning service point after temporarily failing to pay return

visits at the service point.

Canvassing The purpose of canvassing is to seek potential clients who will benefit

from information and services at a family planning service point.

Follow-Up The purpose of follow ups is to remind clients that they have missed a

scheduled appointment and to encourage them to make a return visit to

the family planning service point.

Session Field visits made by community health worker for canvassing and follow-

ups.

Organisations and Acronyms

ACTION FAMILIALE (A. F.) Action Familiale, a non-governmental organisation, was established in

1963 at the initiative of Mgr J. Margeot, then Vicar General of the Mauritian Catholic Diocese. Besides, promoting sympto-thermal, which is a modern natural family planning method, Action Familiale provides a wide range of services which includes counselling services to couples and

youth.

MAURITIUS FAMILY PLANNING & WELFARE ASSOCIATION

(MFPWA)

The MFPWA, a non-governmental organisation, was set up in 1957 by some volunteers who believed that the rampant population growth rate would hinder social and economic development in Mauritius. The MFPWA promotes modern methods of contraception and is involved in many family planning, women empowerment and advocacy related activities.

MATERNAL AND CHILD HEALTH/ FAMILY PLANNING (MCH/FP) The Ministry of Health and Wellness administers the Maternal and Child Health/Family Planning Programme which promotes reproductive health. The Family Planning Programme was integrated with the Maternal and Child Health Services in 1972. Family planning services are available, free of user cost, through a network of health service points.

11 JULY, WORLD POPULATION DAY 2023

UNLEASHING THE POWER OF GENDER EQUALITY: UPLIFTING THE VOICES OF WOMEN AND GIRLS TO UNLOCK OUR WORLD'S INFINITE POSSIBILITIES

≈	What women and girls want matters.	1
~	They make up 49.7% of the global population, yet women and girls are often ignored in discussions on demographics, with their rights violated in population policies.	,
* * * *	This pervasive injustice keeps women and girls out of school, the workforce and leadership positions; limits their agency and ability to make decisions about their health and sexual and reproductive lives; and heightens their vulnerability to violence, harmful practices and preventable maternal death, with a woman dying every two minutes due to pregnancy or childbirth.	
* * *	We must advance gender equality to create a more just, resilient and sustainable world. The creativity, ingenuity, resources and power of women and girls are fundamental to addressing demographic and other challenges that threaten our future, including climate change and conflict.	
~ ~	When women and girls are empowered by societies to exert autonomy over their lives and bodies, they and their families thrive, as the UNFPA 2023 State of World Population report illustrates.	1 1
* * *	UNFPA brings its data, experience and stories to support women and girls around the world, and World Population Day gives us an opportunity to highlight the need to advance gender equality to help realize the dreams of all 8 billion of us on our planet.
