

PRESS COMMUNIQUE

Patient Satisfaction Survey in Public Health Care Services

The Ministry of Health and Wellness is committed to continuously improving the quality of public health care services provided to patients. Feedback from patients is essential to assess the quality of services delivered and to identify areas where improvements can be made.

In this context, a patient satisfaction survey has been developed using a QR code to enable patients to easily access and complete the survey online. The survey is currently being implemented in the five regional hospitals.

The QR code below is displayed at strategic locations in all regional hospitals and can be scanned to access the survey.

The Ministry relies on the collaboration and support of the public for the successful implementation of this initiative.
